

FLAMES OF

Flames of Freedom, the new blockbuster from the creators of Midwinter, offers you total freedom. Freedom of choice, Freedom of action, Freedom of movement.

Dogfight with opponents over villages for command of the skies, or attack ground targets which serve the enemy's cause.

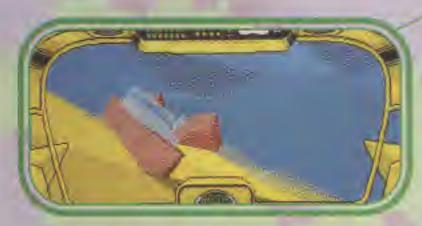

Night time sequences afford excellent cover for secret movement and actions, illuminated by the glare of your jeep's headlights.

The playing area of three million cubic miles is not restricted solely to areas above ground. You have full freedom of movement underwater, and three types of 'submarine' in which to achieve it.

Screen shots shown are taken from the Atari ST versions. Actual sceens may vary by format

Seek out and destroy enemy shipping units, condemning them to a watery grave on the sea bed, from where the ocean's surface is clearly visible above.

FREEDOM

A three dimensional environment packed with action, adventure and strategy. Entering it is easy.....breaking free is what's hard!

A million square miles of accurately mapped 3-D terrain, generated by fractal techniques, and fully light sourced throughout, provides a playing arena far superior to even its predecessor, Midwinter I.

Fly the skies above the forty-one islands by helicopter, zeppelin, parachute, rocket pack, or, as seen here, biplane and balloon, all offering superb views of the land and of the other aircraft.

The enemy have a vast array for firepower aimed at you, on land, in the air, and across the sea, and react quickly and intelligently to your actions.

Flames of Freedom will be available shortly for your Commodore Amiga, Atari ST and IBM PC compatibles.

The sea surface is generated by constantly moving fractal points, causing you to bob up and down as you swim or sail across it.

THE ONE AND ONLY...

Here we are again, with our second new-look issue of The One (was it only a couple of months ago that we decided to bring you an STonly magazine? It seems like years!). We've had a great deal of positive leedback since we first made the announcement that we were going to give up our multiformat ways and concentrate on bringing you the ultimate game guide for your computer but we still want more! Let us know what it is you like about the magazine (so that we can give you even more of it) and what doesn't tickle you so much (so that we can wipe it out!). Tell us about absolutely everything - the disk, the cover, the Work in Progress Features, the Reviews, the Tips even this Contents page! Remember, we're putting this magazine together for you, so let's keep it just the way you like it. But hang on a minute! What are you reading this bit

TEAM SUZUKI THE TRAINER

America's Kevin Schwantz leading from Mackenzie, Radigues, Sheene, Irons... and trailing way back in last place is British hopeful Cedric Blenkinsop, the schoolboy from East Cheam, part of the Team Suzuki line-up."

Poor old Cedric, if only he'd spent more time practising on his computer before signing the multimillion pound deal with Suzuki, then maybe he'd have got to grips with Gremlin's classic 500cc simulator instead of getting to grips with that advertising board on the side of the track.

But you don't have to fall into the same trap as Cedric. Thanks to those awfully nice chaps at Gremlin, The One is proud to present a complete trainer level for Team Suzuki, just the thing to help you learn how to take those bends and handle your gears.

This 'Trainer' level is a beginner's guide to the full program, with the speed slightly reduced and the handling made a touch easier, to allow you to familiarise yourself with the basic mechanics of riding one of the most powerful bikes in the world.

For the purposes of this trainer, there's no way to damage the bike - all you have to do is concentrate on learning the course and

mastering the controls. To begin with, you're given three minutes to complete a lap. Once this is carried out successfully, the time allowed is reduced - this process continues until the Trainer deems you fit to tackle the full program.

INSTRUCTIONS

In default mode, the bike is mouse driven (although there are two distinct mouse control methods and an option to switch to joystick if you prefer) using exactly the same system as is employed in the full game... that is:

Right Mouse Button - Accelerate Left Mouse Button - Brake Turn Mouse Left-Turn left Turn Mouse Right - Turn right But that's just to get the bike moving. There are also a few keyboard commands included to help you get a little more out of the game:

Space - Backwards glance

F2 - Rear view

F1 - Return to forward view

F3 - Remote view from behind (close)

F4 - Remote view from behind (distant)

F5 - External camera (adjust position using the cursor keys) Backspace - Pause

R - Action replay

C - Removes 'bike' display (forward view only)

< > - Adjusts the brightness Help - Toggles control methods

By the time you can complete the course in less than 50 seconds you've mastered this brilliant Trainer. You should now be confident enough in the saddle to tackle the extra courses, the realistic handling, the damage factor and - most of all - the opposition which are all waiting in Gremlin's Team Suzuki,

LOADING

Switch off your computer, insert the disk and switch on again within seconds you will be greeted by a menu screen. Press '2' and the Team Suzuki trainer will now load automatically.

LOADING PROBLEMS AND FAULTY DISKS

IF YOU SHOULD EXPERIENCE any loading problems with either the Team Suzuki trainer, the Logical demo or the Kick Off 2 Goal-den Goals, then remove all unnecessary peripherals (printers, disk drives and so on) and try again. Should your disk still refuse to work, then pop it into a jiffy bag or padded envelope and send it, along with your full name and address, to: The One Disk Replacements, Diskform, Yeadon Airport Industrial Estate, Yeadon, Leeds LS19 7XS. Please allow approximately 28 days (and 28 nights) for your replacement to arrive.

THE COVER DISK

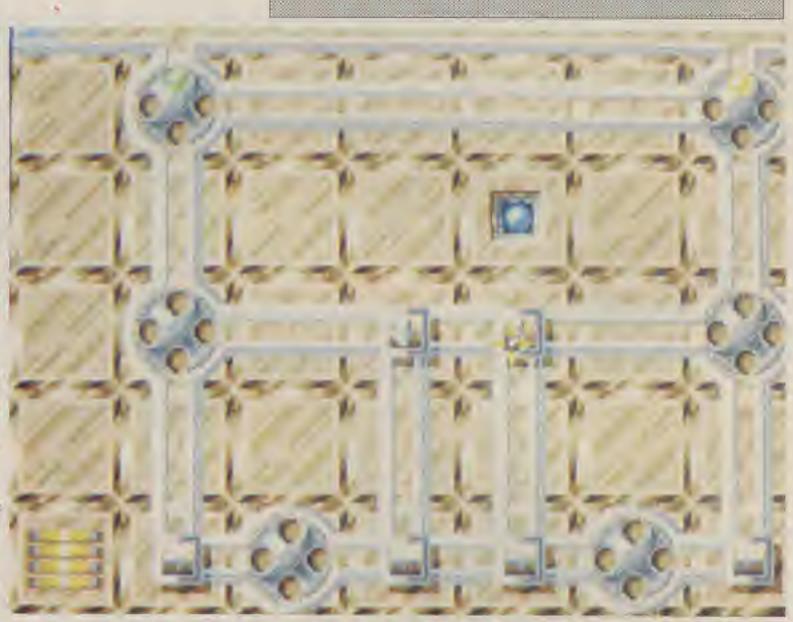

THE DISK PART TWO

A ND YOU THOUGHT that marbles were just for little boys to play with on their Summer holidays. Not so! Put them in the hands of a German programming team and you'll get a highly-playable puzzle game out of them.

There are five levels of this puzzling action to be experienced in our demo of Rainbow Arts' Logical, while the complete game contains a full 99 levels of ball-sliding and wheel-turning fun (see the review on page 82).

Logical, as its name implies, is a game of puzzle solving. The idea is simple enough: each level contains a number of circular wheels joined by pipes - the idea is to fill each of these wheels with four like-coloured marbles by manipulating the screen. Once a wheel is full, the marbles explode and it turns black - turn all of the wheels black and you complete the level.

The thing is, there are all sorts of obstacles along the way. For example, traffic lights indicate which colour the balls have to be for the

LOGICAL

wheel to accept them, coloured gates only accept the colour indicated, colour changers change the marble's colour to the one indicated, one-way gates only allow (surprise, surprise) one-way travel - and so on,...

And just to make things that little bit harder, Logical hasn't only got one time limit - it's got two! The hour glass indicates how long you have left to complete the level, while the shaded bar running horizontally across the top of the screen shows how much time you have left to use the ball that's currently running back and forth along it, waiting for you to bring it into play.

these timers run out, you lose a life and start all over again.

CONTROLS

The control method could hardly be simpler: pressing the right mouse button while the cursor is over a wheel rotates it by 90° clockwise; pressing the left mouse button while the cursor is over a marble shoots it along its adjacent pathway.

LOADING

Switch off your computer, insert the disk and switch on again - within seconds you will be greeted by a menu screen.

Press 1 to select the Logical demo and the screen will revert to the desktop. Double-click on the 'Logical.Tos' icon and the program will now load. When the title screen appears, press Space and an options screen will appear - from here on the entire program is mouse controlled.

The options screen allows you to switch off the music and/or the sound effects and also allows you to enter each level's password, so that you don't have to go back through screens that you've already completed (unless you really want to, of course!). The option which refers to the graphic set is only relevant to the complete game and has no effect on this demo version

THE MONTE 6 ETER

THE CRUNCH BUNCH

Dear The One,

As I was loading my Brar demo disk a message appeared saying 'Please wait whilst decrunching'. Now, I know that large amounts of information can be crunched to take up less room on disks - which is a great asset to you and other magazines which produce cover disks, so why don't software publishers follow your example? Surely this would mean that they could then produce less disks and could save both themselves and their customers money.

Crunching would really come into its own with games. which are stored on several disks - games like The Untouchables, Shadow Warriors and Elvira: Mistress of the Dark. It would be a particular advantage with the latter; although the game itself is top-notch, the gameplay suffers badly as you have to swap the disks every few minutes. I once had to change the disk three times, just to make three moves!

Please could you put my views to a software house and print what they have to say? Luke Durin, West Yorkshire

Well software publishers? The ball's in your court!

WHATEVER HAPPENED TO ...

Dear The One,

Lused to own a Commodore 64 (OK, so nobody's perfect!) and one of my favourite games was Armalyte (by Thalamus) - in my opinion the best shoot 'em up ever on 8-bit. The Martin Walker sonics and sprites were unbelievable and the gameplay was hugely addictive. I believe it's a must for any gamer's collection so can you tell me why nobody has released a 16-bit version? Armalyte isn't the only 8-bit game which deserves to be released on 16-bit - The Citadel (also by Martin Walker) and The Lord of the Rings are just two more examples. I hope you can shed some light on this subject, as I know there are many more 'converts' out there asking themselves the same question. Anthony Seddon,

 Yes and what about Revs, or Thrust - or even the immortal Head Over Heels (which was recently spotted being put through its 16-bit paces up in Ocean's Manchester HQ, so maybe there's hope for that one yet)? There are a great many 8-bit 'classics' which have never made it to the next generation - just about everyone has their own favourite... what's yours?

DESIGNER BLUES

Dear The One. A few months ago, you printed a letter from someone who wanted to know what to do with his idea for a game, but your answer wasn't that helpful!

I started thinking up games to give myself something to do on the way home from work - then I started taking my ideas further, until finally I ended up doing a full-blown instruction book including all the layout and workings of the possibly finished product. Once I had written it all up. I put it in a drawer, where it remains to this very day!

I'm probably a bit better off than the other reader, as I do the graphics for a demo group, but this group is only interested in getting vectors to fly around the screen. I decided to write to a software publisher who published the sort of game that I designed - it might not come as too much of a surprise to you that I got absolutely nowhere.

I can understand that software companies are busy places and maybe they can't

waste their time going through loads of ideas and on-screen demos, but like your other reader. I think that new, 'fresh' ideas may be sitting out there with no chance of being used.

One solution might be for software houses to form small groups whose specific task would be to look at people's ideas with a view to developing any good ones. While I'm on the subject, if I send my idea to a software house, how can I easily protect my ideas - is it true that you cannot copyright a computer game? Anyway thanks for listening... Name and address withheld

 You're welcome. Now down to business. It's not true that you can't copyright a computer game - although the process is a relatively lengthy and costly one, so you would really want to be sure of your game before getting into it. The reason that your game was overlooked by the software company that you sent it to was because it was simply a written draft (at least that's what your letter implies). Your game Idea would have a far better chance of acceptance if some of your ideas had been put into practice, or even if it included some rough graphics. If proof were needed that software companies do accept games from newcomers, turn to the review of Elf on page 60. Not too long ago, this brilliant arcade adventure was taken to Ocean by two complete newcomers, Paul Oglesby and Damian Slee, and now here it is only moments from the shelves. Remember, if at first you don't succeed ...

WINNER TAKES ALL?

Dear The One. I totally agree with Derek Richardson (April letters) about end-of-game sequences, which in most cases are obviously an afterthought on the part of the programmer.

The games manufacturers say that they can't waste

valuable memory and programming time for the sake of a few elite gamers and I can see their point of view - but people who are now paying more than £25. for a game are not satisfied with a disappointing well done' message after hours of practice and perseverance.

So what can be done? All we players want is an incentive to complete the game. So far, this has always been the end-of-game sequence which is almost always an anti-climax. It's about time that manufacturers thought up a new 'incentive' for gamers, This could be in the form of freebies' from the software house whose game you have completed, and it needn't be all that special - something like posters or demo disks would do.

Proof-of-purchase cards could be included with games so that you could show you've actually paid for it and to prove you have completed a game the programmer could incorporate a saveable highscore table into the program (of course, provisions must be made for the 'continue' options in games where your score is reset).

Software houses may argue that the idea would be too costly, but as they stated themselves, few people persevere to complete a game, so their profits would hardly be denied. Having 'freebies' could actually stimulate interest in a game and therefore push its sales ир.

Darryl Byrne, Manchester

 And speaking of end sequences...

MORE TURRICAN?

Dear The One, I have recently completed Rainbow Arts' new release, Turrican 2 - The Final Fight. After two hours of battle with the final guardian, I was presented with an artistic picture of the explosion of the satellite that had previously imprisoned the planet of Lonorin. Then I was

Lancashire.

told to look out for Super Turrican. Could you tell me if this is a myth, or is it seriously being discussed amongst the programmers? Richard Jenkins, Birmingham

 Well Richard, the boys at Rainbow Arts won't say - but as it's on the end screen...

DÉJÀ VU

Dear The One,
I would just like to say what
a good game Shadow
Warriors is. But at the end of
levels one, two, and four, the
men are easy to beat - and
the end of level four has the
same sprites as level two! Is
this because the
programmers couldn't think
of any more sprites, or is
there a better explanation?
James Rice,
Braintree

FIGHTING TALK

Dear The One,
I have recently played an arcade game in which you control one of three players, Haggar, Guy or Codey. It is a one or two player game in the Street Fighter vain. Do you know if it's available yet? Alex Warren.
Wilts

• The game that you remember so fondly is CapCom's Final Fight, which is currently under development at US Gold, the company that publishes all of CapCom's games. Watch out for a review over the next couple of issues.

LIVID OVER LYNX

Dear The One,
I am putting pen to paper
over an incident which has
annoyed and upset me
greatly. I bought an Atari
Lynx colour handheld system
earlier this year - and
although it was expensive. I
believed it was worth it.

You can probably imagine my dismay when I discovered last month that my 'good buy' had not only been completely redesigned, but also halved in price. I now find myself holding a piece of electronic wizardry that is just a few months old, yet worth only a fraction of what

SPEAKERS' CORNER

THROUGHOUT THE ONE'S long and glorious lifetime, we've never been short of one thing lively debate on the letters page. Whether it was the old 'roy computer's better than yours' silliness from the old multi-format days to whether or not the magazine should branch out to cover consoles. Anyhow, we've now decided to create a brand new section for letters of this type; so whether you want to spout about one of the topics mentioned above, or anything else for the matter, then Speakers' Corner is the place for you. So, without further ado...

ENTER THE GREAT DISK DEBATE?

Three and a half inch square plastic casings and a heart of pure silicon - love 'em or loath 'em cover-mount disks look as though they're here to stay. As ever, the great reading public has mixed views on the matter: take, for example, the words of wisdom from Lee Sanders of Bury St. Edmunds...

"Your magazine is one of the best around, but why do you insist on having that worthless piece of plastic on the cover?"

OK, so we should get rid of them... but hold on a minute, let's hear from London's Mitchell Pollington first...

"I am writing in response to the letter from Khizar Durrani, who seemed to think that your cover price was unreasonable as you effectively charge is for a disk. Well, that is the same price as a P.D. disk and your disks are often as good, if not better."

Confused? We are! Well, not really, as one thing that never changes is that if you get a letter expressing a strong opinion one day, it's almost bound to be followed by another one saying the opposite. Still, if anyone else has any views on the matter, you know where we are.

AND NOW... AN OLD FAVOURITE

Dear old piracy. Where would our letters page be without it? The subject of illegally copied software is obviously something that still occupies your minds as the flow of mail on the subject is, if anything, becoming stronger. One reader, who wished to remain anonymous put pen to paper thus...

"Six weeks ago I sent F.A.S.T. a letter

containing the names and addresses of a group which I know to be costing the software industry thousands of pounds each month. I have phoned F.A.S.T. several times since, but the pirates are still operating today. It's no use passing on information to F.A.S.T if they're not prepared to act on it. Could you tell me how many raids, arrests or convictions they make a year?

Many of our readers believe that piracy is in fact caused by the high price of software, a point raised once again, by Mitchell Pollington of London...

"If the price of software was reduced to around £15, many more people would buy the software and programmers would make just as much money - probably more."

Let's clear this point up for once an for all: piracy is nothing to do with the price of software, it's all about people taking something that doesn't belong to them - in other words, theft. And speaking of thieves...

"I am a fully fledged pirate, I pirate games on a regular basis and most of the time I get them a week after or before the games are released into the sliops, It is sad that I am forced into this, but I have to, I earn L6 a week on my paper round and simply can't afford to buy the games I want. I agree that piracy is bad and I don't get as much enjoyment out of a game when it's copied as I would have done if I'd been straight about it and bought it. I think I speak for all pirates when I say, 'until the price of games comes down, we will just keep on backing'."

This sad little piece was put together by a coward who chose to call himself "The Shade" appropriate enough really, as theft is one shady business. One small point I'd like to clear up though is who exactly is 'forcing' this git to steal his software? That argument just doesn't wash: if a person not being able to afford something was a valid excuse for srealing it, then they may as well take the locks off the doors of Porsches and leave the keys in the ignition. No matter what your views are on the cost of software (which is a debate in itself), you have no right to take something that legally belongs to someone else. Make no mistake, piracy - no, let's call it what it is - software theft is carried out by a few greedy individuals who think that they're beating the system. They are, but they're beating It to death:

Got something to say? Then get it off your chest by writing to: The One, EMAP Images, Priory Court, 30-32 Farringdon Lane, London EC1R 3AU (faxed correspondence is also welcome, on 071 490 1094). You could even win a T-shirt if your letter is chosen as the Letter Of The Month. All letters should be written (or, preferably, typed) on one side of the paper only and confined to a single sheet. We reserve the right to edit any letter to fit.

I paid for it.

I fail to understand why Atari didn't take the extra few months to get the design right instead of releasing two versions. This just goes to show that many companies' main priority is making a quick buck and has nothing to do with customer care, I would like to warn readers not to leap in to buy a new piece of technology as soon as it's released. It often pays to wait a while to see how it develops before taking the plunge. Though this may seem like a cynical way to approach new products, it may be the only way to protect ourselves until these companies change their policies. Keith Gratton. Leicester

Ouch! Bitter words Keith.

We can take it then, that

Atari won't be receiving its
usual card from the Gratton
household this Christmas? By
the way, you'll be kicking
yourself even harder when
you turn to page 42 and see
what's on offer in this
month's competition!

HOOKED ON COMPUTING

Dear The One, I am a keen angler, and nothing (except, perhaps, playing on my computer) beats a peaceful day on the river. Do you know if there are any fishing games or simulators in existence? Fishing is a popular hobby with young and old, but doesn't seem to get any coverage at all. So it would be ruce to see games manufacturers doing all us fishermen a favour and giving us the chance to fish whenever we like in the comfort of our own homes. Simon Playle, South Humberside

The almost god-like Jack
Charlton did once lend his
name to an 8-bit fishing
'simulator' ("You've got to put
the fish under pressure!"),
but this gem has so far been
conspicuous by its t6-bit
absence. Anyone out there
know of a game to bait
Simon's hook?

SERGEANT SOFTWARE

Are you in desperate need of software? Then why not try the commander who cares? Send your begging letters to: Sgt. Software, The One, EMAP Images, Priory Court, 30-32 Farringdon Lane, London EC1R 3AU.

Dear Sarge,

I am having great parental problems. My mother has banned me from spending a penny for six whole months. All of my games are completed and re-completed. My dreams of owning such games as Sim Earth, Botics and Supremacy are shattered. All my hard earned money is put into an untouchable bank account for later life. You are the only one who can help.

Neil Dear, West Worthing, West Sussex

Been banned from 'spending a penny' for six months - blimey! You've got far bigger problems than a mere shortage of software. Sorry Neil, in your predicament any donation would be wasted.

Dear Sarge,

I'm a wreck. I go to a highly respected school which I should be proud of, but I'm not. I am in the first year and am extremely unpopular. Our year is divided into two groups: the cool dudes who smoke and drink and do not even know what it is like to be bullied, and the people who are bullied constantly, don't smoke, don't drink and spend most of their time trying to avoid the cool dudes.

This group is a minority to say the least three people have already left the school as a
result of bullying and it's only our third term.
Whenever I go anywhere near some people I
get it. I don't know what to do. I just want to
be left alone.

How can I stop the builying? Please don't tell me to ignore it because I can't. I can ignore verbal teasing aimed at me, but not against my family and I can't ignore any form of physical teasing or bullying against anyone - that's why I became unpopular in the first place. One of my friends was being bullied - I refused to let it lie the would've let it lie - Vic Reeves) and ended up getting bullied myself.

My only joys in life at the moment are holidays, going home to my parents and playing on my computer (for which I can't afford any decent games). Please help me.

Desperate, Farnham, Surrey

 You have got problems: going to boarding school, suffering bullies - and having a silly name like Desperate! It's the least I could do to send you £100 worth of software (which you can always use as a bribe to stop the beatings!).

Dear Sarge,

In my neighbourhood there were a lot of pirates, they sold games and nobody could touch them. I tried to stop them, to talk with them, but they wouldn't listen, so I decided to destroy them.

I bought guns and rifles and I attacked. I fought the pirates for a whole month and destroyed many of them, but I was wounded in battle. I went to hospital where I had five operations. But pirates came to the hospital, took me prisoner and tortured me. The greatest pain for me was the moment when the pirates burned all my games.

I got angry, broke my chains and ran away.

Now I am under police protection, I have an

Amiga but I have no games, and I can't buy
any new ones because the pirates are
threatening every legal seller that if anybody
sells me games, they will kill them. Sergeant
Software, you are my only hope.

Tepic Dragan, Novi Sad,

Yugoslavia

 Whew! Piracy is obviously a far more serious problem in Yugoslavia than it is over here.
 Sorry, Tepic, but if the piracy problem's that bad then I couldn't possibly send any software to your country.

Dear Sarge,

My brother and I share a computer. He has a paper round and so can afford to buy a computer game every few weeks. This would be no big problem if he would let me play them, but he won't, I would get a paper round too if I could, but I am not old enough. I don't get any pocket money so I hardly ever get a new game (except when I do a few jobs around the house, and that only earns a few quid). Please send me some software or I will die of boredom.

Andrew Marks, Chesiyn Hay, Walsali

It seems a shame that all of that software is going to waste in your house, why not use some initiative to get your hands on it. Have you thought about blackmailing your brother? Maybe he has some disgusting habits that he wants to keep quiet, or he fancies some girl at the Comprehensive that he doesn't want anyone to know about.

Dear Sarge.

My Dad bought me a computer last year for Christmas. To my great surprise, he bought £200 worth of educational software as well. Once I saved up all my money to £20, and gave it to my mum to buy a beat 'em up - she came back with a chess simulator. I am not allowed to buy any fun games such as Stealth Fighter or Gods, as this was a waste of money. I am gradually turning into an egghead and I am a really boring kid. Please could you send me some nasty, horrible time-wasting games.

HELP IS ON ITS WAY for those who need it with the Infocom classics recently re-released by Virgin Mastertronic. Virgin is putting together two volumes of hints, tips, maps and object tables covering all 10 Infocom games in its budget series, including Hitchhiker's Guide, Enchanter, the Zork trilogy and the immortallynamed Leather Goddesses of Phobos. The books will cost £9.99 each and are due to be published in August.

COME FLY WITH US...

...AND MICROPROSE, as the 'King Of The Sim' has a flight-tastic prize up for grabs for no less than five lucky readers of The One.

That's right, for no apparent reason, MicroProse is offering the five winners of this great competition a pair of tickets each to the International Air Tattoo '91 at Gloucestershire's R.A.F. Fairford on either July 20th or 21st, where they'll not only get to look at loads of aeroplanes and stuff - but they may even get a chance to meet some of their favourite The One journalists!

And to be in with a chance of winning one of these five pairs of tickets, all you have to do is name three MicroProse flight simulators!

That's it, just put the names on the back of a postcard (or a sealed envelope) and send it to: Fly Boys, The One, EMAP Images, Priory Court, 30-32 Farringdon Lane, London EC1R 3AU, to arrive no later than June 10th.

TETRIS RELAUNCHED

TETRIS, ARGUABLY THE GREATEST puzzle game of all time (in fact, some would say the greatest computer game of all time), is about to resurface after a long, enforced absence.

Having first appeared over four years ago, this classic test of logic and dexterity was soon put

on ice by
Mirrorsoft, its
original
European
publisher,
when a major
legal row
broke out in
the U.S. over

who exped the game's rights.
It appears that Nintendo won
that particular argument, as the
game now comes packaged with
its Cameboy handheld.

Now however, French-based Infogrames has somehow snapped up the rights to relaunch the game into the European market - and obviously thinks that the game's long-enforced absence should have kept interest high enough for it to sell at £19.99.

Although the publisher and packaging may have changed, the gameplay remains the same: you rearrange a random series of talling blocks to make complete lines at the foot of the screen. In this version, the speed can be varied, your high scores can be saved and you can play in tournament mode with up to live other players.

INDIANA JONES RETURNS

LUCASFILM HAS JUST ASTONISHED the World by announcing that it has begun development on its

fourth Indiana Jones game - even though there may never be another Indy movie!

Indiana Jones And The Fate Of Atlantis puts the intrepid archaeologist on the trail

of Nazi sympathisers who've stolen ancient artefacts, believed to have been
excavated from the fabled lost city of Atlantis.

Although LucasArts (the parent company behind all of George Lucas' products, including the Indy computer games) still denies that there will be another Indiana Jones film, the game's scenario is also being used for a series of comic books (right) and rumours are rife that Harrison Ford has actually agreed to don the hat and jacket for one last crack of the whip.

Just like Indiana Jones And The Last Crusade, this latest game will be released in two separate versions - one in the usual Lucasfilm adventure style, the other an arcade action game which is being developed in the UK by Attention To Detail.

Indy fans should pencil in October and November in their diaries as potential release dates, however no price for either version had been decided at the time of going to press.

ROCHETEER

UP, UP AND AWAY

HE MAY LOOK LIKE ROCKET RANGER, he may sound like Rocket Ranger, he could even fly like Rocket Ranger, but the Rocketeer is actually the star of a brand new film from Disney due for release later this year. In a story which pays tribute to the classic serials of the '50s, an American scientist discovers an ancient rocket pack and proceeds to fight for truth, justice and the American way in a struggle against the evils of Nazidom. The Rocketeer opens in the U.S. on June 21st, a British release date has yet to be confirmed.

SIMIS SCORES A FIGHTER DOUBLE

THE MiG-29M SUPER FULCRUM may be a topsecret Russian fighter plane, but that hasn't stopped those intrepid chaps at Simis (the team behind Domark's MiG-29 Fulcrum simulator) from digging up all of its technical specifications.

So it comes as no surprise that this advanced Soviet fighter plane is to be the subject of the follow-up to MiG-29 Fulcrum, with new

THE HARRIER AV-8B, next for the Simis treatment when Domark's finished with MiGs.

performance ratings, combat scenarios, and a redesigned control panel.

Domark plans to release the game in September, to coincide with the first public showing of the real-life MiG-29M at the Paris Air Show. Anyone who already has the

original program, and doesn't fancy paying another £30 for the new version, will be able to buy a special upgrade for around £12.

But Domark isn't confining itself to simulating. Eastern Bloc aircraft, as the American version of the Harrier Jump Jet, the AV-BB, is also about to get the Simis treatment.

Harrier Assault isn't due for telease until late next year, but the basic gameplan is already taking shape - you'll play the part of the Commander of the Rapid Response Force; setting objectives for your team of US Marines.

WOULD YOU BUY A COMPUTER GAME FROM THESE MEN?"

WE WERE CLEANING OUT our picture liles just the other day, when we noticed just how many pictures we had of Domark's joint managing directors. Mark Strachan and Dominic Wheatley, either in silly poses or dressed up in costumes so outrageous that you'd be embarrassed to go to a hancy dress party in them. Would these men do anything to sell a computer game? we asked ourselves. On the evidence of the following pictures, it looks as though the answer could only be a resounding 'yes'.

THEY'D RELEASE THEIR CAMES on the Enterprise (keeping arraight faces)

THEY D'DRESS OF as hippies ("I think I'm sitting on ore joss-stick")

THEY D BOWL A MAIDEN OVER (Mark a nothing by David loke).

THEY'D LOOK BEAL MEAN apparently. Duminic - he's the one on the left was asked to Inni. as imphrening as he could for this shot, but all he could manage was this polite speet).

THEY'D LOOK SHAKEN but stirred. Actually this is a precty good pierure to much off with, as it takes more than its bair shar, of questions. For instance, why are Dominic: shoes proping out from under the door. Or - an even more sipister query this one: how come Mark basis no shallow on the booner of the cor. We think we should be tord!

AUDIOGENIC SELECTS GOOCH

DECENT (OR EVEN HALF-DECENT) cricket games have always been pretty thin on the ground - in fact, here at *The One* we can't think of a single game that's successfully captured the atmosphere of the most English of sports. However, Audiogenic's forthcoming *Graham Gooch's Cricket* may well change all that.

Due out next month (which should just coincide with the climax of the 'Windies' tour) the game will give the player the option to compete in either full tests or 'limited over' matches, or even to forget about competition completely to get in some practice in the nets.

Once in the game, you'll be able to choose between 'fast', 'spin' and 'swing' bowling and a wide choice of batting strokes. And despite the complexities of the real game, Audiogenic has managed to confine its incarnation to two basic views: either from behind the bowler or, once the batsman has struck the ball, a full-pitch overhead view.

*THE BATSMAN'S HOLDING, the howler's Willie... *Relive your favourite cricketing moments in Audiogenic's Graham Gooch's Cricket.

FROM SIERRA

US COMPANY SIERRA, newly

set up in the UK,

has already put its customer support telephone lines into operation. Call them on 0734 303171 for help with any Sierra product, or if you have a 'touchtone' phone, you can call the 24-hour automated helpline on 0734 304004. Modem owners can get through to Sierra's bulletin board system on 0734 304227 for hints, enquiries and downloadable demos.

BANZAI

WITH A CARROT IN ONE HAND and a hearty cry of "What's up Doc?", the Ninja Rabbits have arrived on the scene. In an obvious attempt to cash in on the turtles' band wagon, Microvalue has released this tale of mutated bunny-wunnies and their mission to plug a deadly gas leak at the nearby chemical factory. Ninja Rabbits is available now at the value-forbunny price of £6.99.

CORE'S FIRST ATTEMPT at a shoot em up promises plenty - but doesn't it look a little familiaré

CORE EVACUATES EARTH

EXPLORATION IN THE OUTERMOST REACHES OF SPACE is the theme of Frenetic, the next game due to dribble from Core's productive pipeline. The classic shoot 'em up action sees your spacecraft attempting to create a safe galactic passage for an interstellar fleet evacuating the Earth's population.

The finished game will boast eight separate levels, each with its own end sequence in which you must defeat the warship from Mozone (the mighty warships of Mozone having already desecrated most of Earth). You may want to rope in a friend to help, as the two-player option doubles your firing rate.

Look out for Frenetic, on release

Look out for Frenetic, on release next month.

THE WHOLE WORLD IN YOUR HANDS

SID MEIER, AUTHOR OF RAILROAD TYCOON, is currently hard at work developing a 'mankind simulator' - once again for MicroProse and appropriately entitled Civilisation.

The game drops you (and up to four companions) on a lonely plain in the year 4000 BC - from then on, the survival of the human race is in your hands. You'll need to build relationships, forge alliances and invest in technology and medicine (for example, if no-one invents the wheel, your race could die out).

There are four different starting scenarios to choose from: Mesopotamia, North America, the World or even an all-new, computer-generated environment.

Because of its size and complexity, Civilisation probably won't make it to the shelves until well into next year - as ever, we'll keep you posted.

ELECTRA-FYING

YOU'VE NEVER HAD IT SO GOOD! Following the recent launch of Leisuresoft's Tecno Plus range of peripherals, Britain's other major software distributor, Centresoft, has decided to get in on the act by producing its own range of 'branded' goods.

The Electra range offers everything you could possibly need for your ST, from half-meg upgrades with a copy of Deluxe Paint at £64.99 to four-way joystick adaptors (for use, amongst other things, with that footie classic, Kick Off 2) at £5.99.

The entire range will be available from all good software stores, but if you have any trouble finding what you're looking for, contact Centresoft on (021) 625 3388.

However, some readers of The One won't even have to go to that trouble, thanks to our amazing giveaway competition, because Centresoft is offering one of either five half-meg memory upgrade or five four-player joystick adaptors to the 10 lucky winners who can answer the following question:

An electricity plug has three coloured wires running into it - what are they?

Send your entry (on a postcard please, or the back of a sealed envelope) to Electra-Fying, The One For ST Games, Priory Court, 30-32 Farringdon Lane, London EC1R 3AU. All the usual competition rules apply and your entries should reach us by Monday, June 10th.

THE GOAL-DEN SHOT

The Kick Off 2
Golden Goal Of The Month
PRESENTED BY THE ONE
MAGAZINE AND ANCO
THE KICK OFF 2 GOLDEN GOAL
CHAMPIONSHIPS

AS THE CHAMPIONSHIP qualifying rounds enter their fourth month, the goals just keep getting better. Also, as this is the first month that the goals are contained on our cover disk (see page 8 for details - although the winner is actually goal three, not goal one as it says on the disk), we felt that it had to be something special. And the belter we received from Peter Halloran in Dorset is something special indeed. A spectacular volley from 40 yards out proves that Dorset isn't only good for making cream...

AS PETER'S
OPPONENTS line
up for a free kick,
things aren't
looking good for
the Dorset
Dynamo. As the
kick is taken
though, the ball is
intercepted and
Peter prepares for
a quick break.

A LONG PASS downfield looks set to send Peter's centre forward haring towards goal. But instead, he takes the ball on his right foot before it touches the ground and lets fly...

CATCHING THE GOALIE unawares, the soaring volley flies in a perfect arc straight into the back of the net. Boot-iful.

Can you do better? Are your shots on goal so good they'd make Gazza start crying again. If so, send it to: Golden Goals (Kick Off 2 Championships), The One Magazine, Priory Court, 30-32 Farringdon Lane, London EC1R 3AU. Don't forget the prize is now an entry into the Kick Off 2 Championships and that we only want the best, the very best, anything less just won't do. Unfortunately we are now unable to return disks, even with an SAE, sorry about that!

IGNORE THESE RULES AT YOUR PERIL

FAILURE TO COMPLY with any of these regulations merits instant disqualification.

1) No more than THREE (3) goals per disk and no more than one disk per entrant.

2) All goals MUST be scored by the entrant and NOT by the computer (even in Position play you have to be the one that gets it in the net). We can tell, so don't waste our time.
3) The disk LABEL must contain the following information: the entrant's name, address and (if applicable) telephone number - it must also clearly state that it is an ST disk!
A description of the goals would also be handy, along with what type of pitch they were scored on.

MUSICAL MIRACLE WORKER

SOFTWARE TOOLWORKS RECKONS that it can work musical miracles - even for the tone deaf!

The reason for this? The firm's Miracle Piano Teaching System, a package which includes a full-sized synthesiser to plug into your computer and a 200-lesson tutorial software to take you through all stages of plano playing - from Les Dawson to Liberace.

Besides taking lessons, you can also hone your skills using arcadestyle techniques (one lesson, for example, has you shooting targets by hitting the correct note on the synthesiser). The keyboard has 128 separate sounds and effects, allowing full orchestral backing.

Although no details could be confirmed at the time of going to press, the Miracle is expected to retail at around £299 (including keyboard) and should be available sometime in September.

GOLDEN SUPPORT

US GOLD HAS SET UP a number of telephone 'helplines', specifically for those people who are stuck on its adventures and RFGs. Computer-activated, the lines are all of the 35p per minute off-peak, 44p per minute peak-time variety.

When you call, you will be asked which part of the game you need help with: the telephone tape will then switch to that topic at your spoken prompt. Further lines give details of new releases and competitions, and all are open 24 hours a day, seven days a week.

The numbers are as follows: New releases - 0839 654124 Lucasfilm games - 0889 654123 (this line covers The Secret Of Monkey Island, Indiana Jones And The Last Crusade, Zak McCracken And The Alter Mindheuders. Mantas Mansion and Loom) Delphine games - 0839 654284 (covering Operation Stealth and Future Wars) SS1 - 0898 442025 (the first of three, covering Hillsfor, Dragons Of Flume and Horoes Of The Lance) SS1 - 0898 442026 (for Pool Of Rudiance, Curse Of The Acure Bonds and Champions of Krynn) SSI - 0898 442030 (for Buck Rogers and Secret Of The Silver Blades)

GAME FOR A LAUGH

WE RECEIVED QUITE A FEW imaginative answers to last month's Sega Game Gear competition - but mainly blank postcards and personal abuse. The reason for this? We forgot to run the question!

We could try to wriggle out of this with some excuse, but we're going to come clean - a dog ate it (you're fired - Ed).

Just to recap, last month we gave you the chance to win one of Sega's wonderful colour handheld consoles.

However, since we failed to deliver the question, this time around we're going to do things a bit differently. The answer to last month's question was 'Japan' so, all you have to do now is guess the question!

Once you reckon you know the answer (or, should we say, the question), pop it on the back of a postcard (or, you guessed it, a sealed envelope) and send it to: One; EMAP Images, Priory Court, 30-32 Farringdon Lane, London EC1R 3AU, Closing date for entries is June 10th 1991.

THAT WAS THEN

1580E 9: JUNE 1985

AN EXCITING ISSUE this one: Kick Off, one of the most successful games of all time, made its review debut. We only gave it a measly 88 per cent, but then, things were tougher in those days. The reviewer was our very own faul fresley (at the time a more Magazine Assistant) who said. Anco's footic game is by far the best of its type to appear on 16-Bit, and unless the opposition comes up with something really special, it's all over bat the shouting. Well, we all know now that the opposition never did come up with anything really special and the only tootic game to surpass Rick Off has been Anco's own Kick Off 2.

As a small aside, one rather embarrassing story connected with this review is that a preproduction copy of the game had been kicking around the office for about four menths prior to our leceiving the Finished thing - and nobudy took a blind bir of notice of it.. if organization and we'd known then what we know DOW.

The up-andcoming UK subsidiary of US firm MicroProse featured
beavily in the issue. The excellent Houlu RVF from one of
its new labels. MicroStyle, was the main cover image and
gave rise to one of the worst cover lines in the history of
mage times. Ride Very Fast (geddits). The offending party
still works for the magazine today (why!), but he shall
remain unnamed to protect the innocent (his mirials are
C.B. though).

Which Prose also made big news this month because it had just bought Telecomsoft. Nowadays, of the rhee-labels included in the deal - Firebird, Rambird, and Silverbird - only Rambird exists.

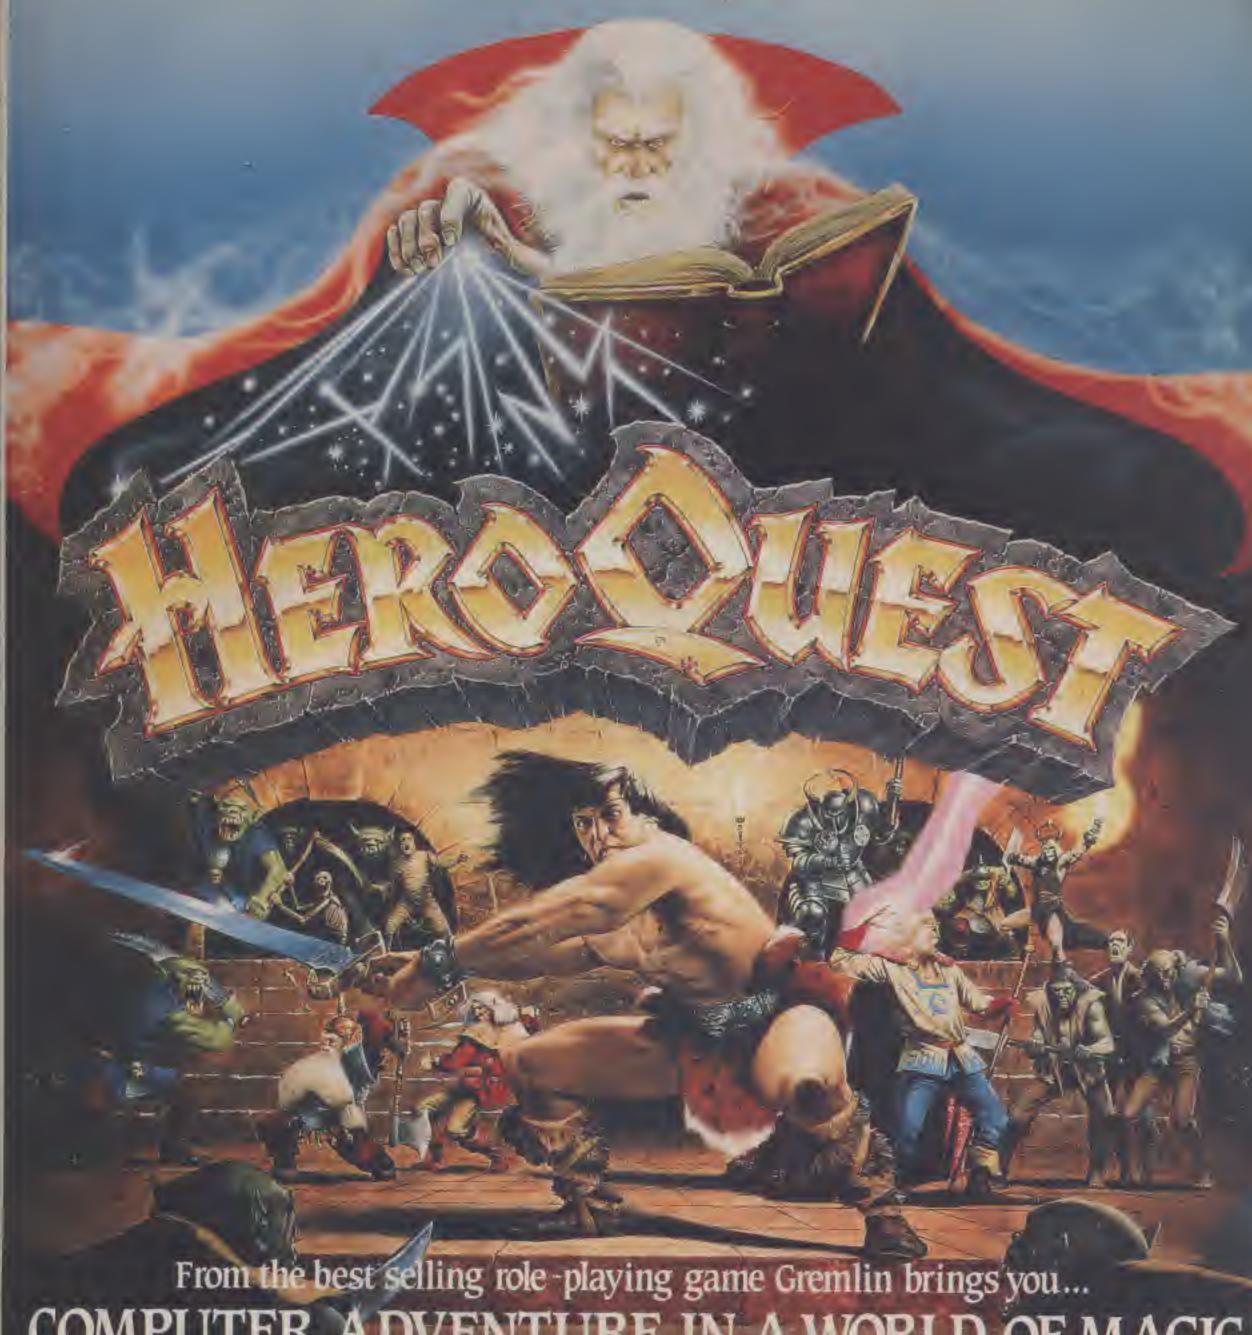

One game that had recently been the subject of a lot of enthusiastic journalism was Bullfreg's Populous, published by Electronic Arts. All that excitoment now proved to be very well deserved, as our exclusive Software Circus charts showed Populous shooting straight to Williaber. One on two of the formats that we covered in those days (gives which rwo!)

"US company Cinemaware came under the Work in Progress spotlight with its cribute to the '50s science-fiction film, It Cime From The Descr. As well as charting about grant arts and what jolly good things CDs were, company MD Bob Iscob roak the opportunity to claim that "British programmers are the best in the world technically, whereas the US don't program so well, but produce better concepts." There hasn't yet been a mass exodus of British programming talent to the States to bear out this theory, but who knows what might happen during the next two years."

It was American talent that impressed us most on the reviews from: Spectrum HoloByte's Falcon. The Mission Dists Volume I clocked up an impressive 91 per cent. Other notables were DMA Design's two-player shoot 'em up Blood' Money, Core Design's excellent platform romp Rich Dangerous, Delphine's Bio Challenge (one of its early arcade games holore the company became an adventure specialist) and the bizarre Wein! Dreams.

To round off the issue we took a look at Harror Software, a genre that many developers have dabbled with, but less with much success. We mentioned several games, one of which. A Nightman On Elm Sirect never quite made it out of the US Gold boiling por (a shame really, because we had a Robert Englund interview carefully prepared, which, to this day is sixting in the Ed's drawer gathering dust).

DIVIA Design's Cole was another game mentioned in that piece which still hasn't got much further than the drawing board. That won't stop it from appearing in further termspectives though Perhaps one day we'll be able to look back two years to its successful release.

SYSTEM 3's 16-BIT BLITZ

VARIETY IS THE SPICE of the line-up of games due from System 3 over the next 12 months, with its range including conversions of highly-regarded 8bit titles such as Last Ninga 3 and Muh, as well as 16-bit originals.

System 3, a company that's always been best known as a developer for the C64, now reckons that it can bring some of that magic to a slightly more powerful machine. The first of its upgrades, Last Ninja 3, tests your martial arts skills over five levels. with the gameplay including puzzles as well as pure combat and the landscapes hiding objects which can be used as weaponry later in the game.

Another of the firm's big 8-bit names, Myth, is currently undergoing an ambitious revamping. When finished, the game will take the player through the legends of different eras. including scenes from Greek, Norse and ancient Egyptian

number three and

WHERE IN TIME could you possibly be in this, one of Myth's many time-based levels¢ It's all Greek to

mythology. Once again there will be a healthy mixture of exploration and combat although this won't always be as straightforward as hacking the bad guys to bits.

The last game due to have an extra eight bits added on is Vendena, a multi-section arcadestyle game. All three titles should be released over the next couple of months.

Leaving the old days behind for a moment, Silly Puny (a pretty silly name, we're sure you'll agree) is a 16-bit original in which you are (surprise, surprise) a ball of blue putty. Due for a November release, this one will see you zap your enemies by wrapping yourself around them as you roll and bounce around

the play area.

A little more conventionally, Changeling is a space exploration game set in the catacombs of disused mine shafts on a fardistant asteroid. The reason for the name is that there are four different forms that you can adopt and change into during the game: in some stages you'll need to fly or swim to progress and must choose the relevant metamorphosis. The release date for Changeling is still to be confirmed, but it appears to be a case of 'this year, next year', rather than 'sometime, never'

One which will definitely make it by early next year is Constructor, a trading/building game with plenty of strategic sub-plots. "A good game for bank managers on their lunchbreak," says System 3's Adrian Cale, which may or may not make you rush out and buy it

when it's released.

Finally, System 3's previous 16bit offerings have been rounded up into a compilation, the System 3 Premier Collection. This collection consists of Tusker, Flimbo's Quest, the veteran IK+ and Ninja Remix (a sort of 'Last Ninja Two and a Half') and should already be hitting the shops as you read this.

Oh, before we forget, all the games will cost £24.99.

What's new, soft, and can design you a new bedroom? Incentive's 3D Construction Kit!

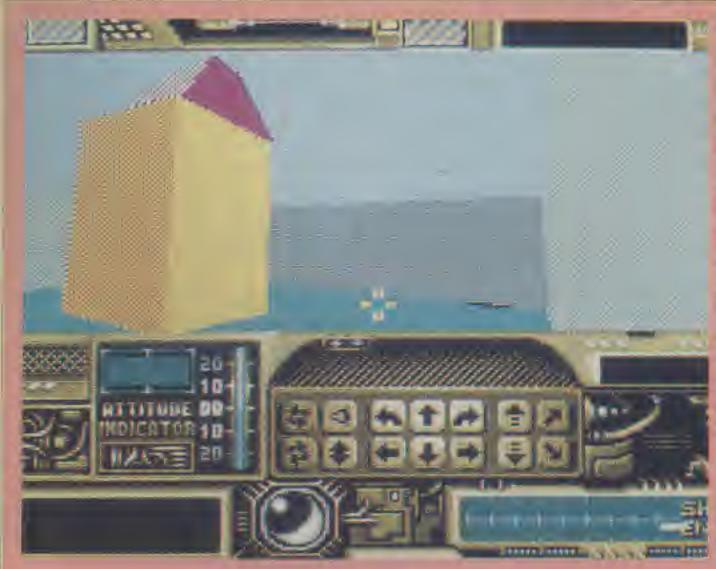

What's new, hard, and sits in your bedroom?

Commodore's CDTV!

T LEAST, IT COULD BE SITTING IN YOUR BEDROOM, if you're the winner of the great Domark competition which is to be launched next month to celebrate the release of the 3D Construction Kit. We'll be asking you to design a game using the kit - and not only will the winner walk away with Commodore's wonder machine, but he or she will also have their game published on The One's cover disk.

Full details will be announced next month, so that everyone who wants to take part has time to buy and use the program. The competition will be open for three months, so you'll have plenty of time to come up with something spectacular.

Look out for next month's exciting issue for all the info...

THE 3D CONSTRUCTION KIT is an all-new utility package that allows you to design anything from house interiors to complete games, using the remarkable Freescape system (as seen in such Incentive games as Castle Master).

The kit's simple langauge allows sophisticated animation and user interaction, while still producing almost professional results.

For more information, turn immediately to the review section in this issue.

OW DO YOU FANCY owning a machine with graphics and sound as good as an Amiga, but with a disk capacity 700 times greater? THE ONE - ON SALE JUNE 26TH

America - land of the free, mom's apple pie, the stars and stripes, the San Francisco 49ers... and 'Crazy' Dave Gruisin. In the first of an ongoing series, The One's all-new, fresh-faced Stateside roving reporter brings you all the latest in US games and gaming technology - and generally 'has a nice day'. So roll those drums, 'cos here comes...

HITHERE BRITISH
BUDDIES! Dave Gruisin
here... 'Crazy' by name
and 'first with the news' by
nature!

Now that The One doesn't review PC games any more, the Ed thought that he'd better have someone 'on the ground' over on this side of the Atlantic to keep you up to date with what's happening U.S. gamewise.

I've been playing, writing about (and cheating at) computer games since the beginning of time, and having cut my critical teeth working on the late-lamented Rolling Scroll (America's greatest games magazine, which unfortunately closed in '82) and Stars And Bytes (which lasted a year longer) there ain't no sucker on this whole continent better qualified to tell you what's hot and what's not.

In what will become a regular feature, I'm going to keep you up to date with the cream of the new releases from all the giants: Electronic Arts, Lucasfilm, Sterra, the Realtime Instrumentation Corporation and the rest...

So let's get on with the show, 'cos Grulsin's cruisin'...

STAR WARS Lucasfilm Games

CAN YOU FEEL THE FORCE? Lucasfilm Games' next release on the Nintendo Entertainment System is based around the '70s blockbuster which launched the careers of Harrison Ford, David Prowse (later to find real fame as the Green Cross man - the man who helps you Limeys across the road) and R2-D2. That's right, Star

Wars is back.

This latest twist in the Star Wars game saga allows you to navigate the Millennium Falcon through an asteroid field and fly your X-Wing fighter into battle against the Deathstar. All the main characters from the film - Luke Skywalker, Han Solo, Princess Leia, Obi-Wan Kenobi and C-3PO - are included, each with his or her own individual traits (part of the fun is finding out how

LOOK OUT FOR SAND PEOPLE, Sarriac pit monsters, sand worms, Banthas and Jawas while driving around the dusty desert surface of Tatooine.

to use these individualities to your advantage).

As in the film, the game opens in the Tatooine Desert with Luke, astride his (t)rusty landspeeder, searching for Obi-Wan Kenobi, who will give him a light sabre and teach him the ways of the Force.

Luke then travels into the space port of Mos Eisley, where he fends off Imperial Stormtroopers and meets up with lusty space cowboy Han Solo, pilot of the Millennium Falcon. Soon, the two buddles find themselves on a mission to rescue Princess Leia from Darth Vader,

before finally kicking ass on the Deathstar. Don't get too confident of your impending success though, this version of Star Wars has several different endings.

And the good news is that, for once, Nintendo's not going to keep all of the fun to itself - rumour has It that this game will also make it to all major keyboard formats. So, keep watching the skies..

CASTLES

Could this little beauty be the Sim City of 1991? From the maker of The Bard's Tale series and Battle Chess comes Castles. Interplay's combination of a castle-building and role-playing which gives you the chance to construct your own Camelot.

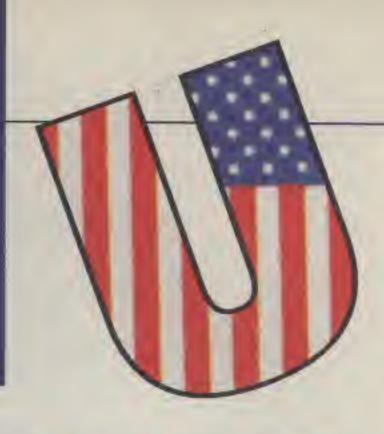

Taking the role of a 13th century land baron, you design, build, manage and defend your dream castle. First you find a suitable, easily-defended site. Then you select the best places to put the walls, towers and gatehouses. How high

JETFIGHTER II - Velocity

HOLY COW! California's been invaded by South American terrorists who've used drug money to buy the latest weapons and Scud missiles - only the street gangs of East L.A. are offering any armed resistance.

What can the government do? They can't nuke their own cities!

Cut to Commander Dusty Gray, a 'Top Gun' test-pilot whose task is
to wipe out the terrorists' SAM capacity for the next six months.

Only then can the good guys send in their bombers to blow the
drug-dealers away.

As a member of the Air Elite, you'll have to stop htjackings, terrorist missile strikes and surgical bombing runs in over 100 diverse combat missions. These can be flown in any of four jet fighters: the F-18 Homet, F-16 Falcon, F-14 Tomcat and the aforementioned F-23 ATF. This stealthy baby is supplied with the latest weapons systems, radarevading materials and aerodynamic design allowing speeds in excess of Mach 3.

JetFighter II: Advanced Tactical Fighter is the latest creation of Bob Dinnerman, the talented programmer who previously designed the Discs Of Tron coin-op for Bally and the critically-acclaimed F/A-18 Interceptor for Electronic Arts, "His ongoing desire to push back the boundaries of technology and playability brought the next generation in personal flight simulation – JetFighter II," remarks Velocity - who obviously like the guy! I mean, check this out... "It destroys the competition with advanced 3D simulation technology featuring the amazing new F-23 Advanced Tactical Fighter complete with breathtaking scenery and the most spectacular jet dogfight action you will ever experience." Far out!

Billed as a containing some of the best 3D graphics ever seen. JetFighter II features 'real world' cityscapes, accurate shadowing and light-source shading. You also get the chance to fly incredible midnight dogfights. If your flying skills are lacking,

you can get advice from the innovative 'hypertext' help system and there is also an instant flying mode for beginners.

JetFighter II is currently available on your side of the pond through US Gold, costing £39.99. It's PConly at the moment, but while the original JetFighter never escaped from its MS-DOS ghetto, there's avery good chance that this one will. We'll keep you posted.

should you build the battlements? What level of taxation should you squeeze out of the local peasants to pay for all of this expensive endeavour? It is all up to you.

Castles will be accompanied by a special musical score and will come complete with three increasing levels of difficulty.

And if the mediaeval theme cauches your fancy (but you're more interested in some olden day out and thrust than house building), you may be interested to hear that Tengen's Ramparts coin-op is also due for conversion.

CYBER FIGHT Electronic Arts

IT'S OVER TO SAN MATEO FOLICS, as Electronic Arts is bringing its feet firmly to the ground for its next release, an interpretation of a hituristic gladiatorial fight.

Cyber fight (a working title only), places its combatants inside exo-skeletal fighting machines, aims them with sledge hammers; wire-guided bazookas and nuclear warheads and displays the results in glorious 3D.

There's more to this contest than beefy weapons though. You can also equip your exo-body with a variety of add-on cybernetic devices such as radar vision, invisibility fields and battle computers to

give you an edge.
Combatants
must also tackle
physical forces in
the arena
including gravity,
friction, Inertia
and elasticity.

FROM THE AUTHOR OF POWERDROME comes Cyber Fight, a sci-fl 'sport' filled with sledge hammers, exo-skeletal fighting machines and Gouraud shading.

After each battle, the winner can scavenge the remains of the loser for extra hardware.

To bring extra realism to the subject, programmer Michael Powell has used 'advanced shading techniques' to create smooth metallic surfaces and particle models for smoke, rocket exhausts and explosions.

To help you take care of your friends, EA has included numerous two-player options, including splitscreen and computer link-up modes. Happy bashing...

DEATH OF THE GRAY GHOST

ALTHOUGH JETFIGHTER II is based on the YF-23 Advanced Tactical Fighter, in real life the US Air Force has opted for its rival.

Last month, the Pentagon awarded a 650-plane contract to Lockheed, Boeing and General Dynamics worth \$95 billion in orders over the next 20 years.

Lockheed's YF-22 Advanced Tactical Fighter, dubbed Lightning Z, is to replace the ageing F-15 long-range fighter.

The ATF doubles the range of the F-15 Eagle, is more manoeuvrable and harder to detect by radar. This stealthy aircraft can even 'supercruise' (that is, fly at Mach 1.5 without using afterburners) thus cutting fuel consumption and IR-signature.

Both the YF-ZZ and YF-Z3 'Gray Ghost' (from Northrop and McDonnell Douglas) prototypes cost almost \$1 billion each to make. A fly-off between the two planes started last August at the Edwards Air Force Base in California. Over 5,000 engineers, computer experts and technicians were involved in this spectacular – a dogfight with only financial casualties.

Perhaps the factor that tipped the deal in favour of the YF-ZZ was that Lockheed flew 74 test sorties instead of just 50 for Northrop's plane. The ATF fighter could end up costing as much as \$135 million apiece and should be in service by the end of 1997.

CHUCK YEAGER'S AIR COMBAT Electronic Arts

ARE YOU A FRUSTRATED DESKTOP PILOT? Is that MiG-25 flying rings around you? Sounds like you could do with some help from Uncle Chuck, the Mighty Yeager, bearer of the Right Stuff and the first man to fly faster than the speed of sound.

In his latest collaboration with the guys from San Mateo, Electronic Arts, that aviatory legend Chuck Yeager assesses your flight technique and tells you how to get out of tricky combat situations - and all using speech digitised from the living legend himself!

Chuck Yeager's Air Combat has been brought to you by Bruce Iverson, the same guy who was responsible for LHX Attack Chopper, but it's also had major design input from his Chuckness.

This collaboration gave Iverson a real buzz: "I admire anyone who has the

guts to fly in a real dogfight," he confides. "The more!
read about it, the more amazing it seems that people
actually do it. Yeager is especially admirable because he
based a whole career on dangerous flying."
You can choose from over 50 missions, including some

You can choose from over 50 missions, including some of the most hair-raising aerial combat from World War II. Korea and Vletnam - the result is a series of fast and futious doglights involving up to 16 aircraft.

Having chosen their kite, selected the factical situation, fixed the skill of enemy pilots and then finally chosen the number and type of enemy aircraft from 17 different models (whew!), trainee fighter pilots can invoke a number of cheats to get them through their first dogfights. Invincibility, easy landings and a never-ending supply of ammunition are all available to those who have got the Right Stuff - but don't want to use it just yet.

Developing the game has involved liverson in quite extensive research. "The first step is reading the historical sources and deciding what qualities of each plane should be included." Iverson explains. "The FW-190, for example, gives poor performance at high altitude. I have to make sure that my aerodynamics code simulates these factors... and I rewrite It until it does."

Before he started devising computer games, Iverson used to cook hamburgers for a fast food restaurant in Florida - but hey... that's irrelevant!

FOLLOWING ON from the cyberpunk detective adventure Rise Of The Dragon, the second product to spring from Dynamix' Game Development System is set way back in the roaring '30s.

In Heart of China, you can visit numerous exotic locations of the time, from the cafes of Paris to dirty Shanghai backstreets. Like countless games before it, your task is to rescue a pretty young woman from a bunch of dastardly kidnappers.

At least you're not tied to the keyboard though - you just look at the screen, place your cursor over anything that interests you, and press the fire button to see what happens. "With our 'point-and-click' interaction system, our goal was to eliminate the frustration factor from

adventure gaming, so that nothing interferes with the experience of the game," confirms Jeff Tunnell, Dynamix' President.

To keep even the most dedicated couch potato happy, Heart Of China includes beautiful hand-painted backdrops and randomly generated animations, an indication of why there is eight megabytes of game data in there.

Now that Dynamix has combined full-colour paintings, live actors and digitising to achieve the stunning look of Heart of China, the 'Interactive movie' seems just that little bit closer.

FOOD

THERE'S MORE TO THE U.S. OF A. than games you know - this little country of ours is also as good a place as any to chow down! Here's a rough guide to my favourite eateries in my own home town... the Big Apple.

So you've just landed in JFK airport and you're looking for a filling meal that's a little bit different. How about a Japanese Steakhouse? In a Benihana restaurant you can experience the sights and smells of food being cooked on searing hibachi grills.

If you like your ribs a little less spicy, go for Tony Roma's Rib House. Take-out and delivery services are available in this cheap and tasty chain of diners.

And staying with Italy, what better place to eat Fetuccine Alfredo than in the worldfamous Alfredo The Original of Rome? Here you'll be offered delicious Italian pasta, veal and chicken dishes along with live jazz music.

New York is packed with Mexican bars and eating places, one of the best Is Cinco De Mayo in the Soho district. For a real treat, try the chicken in pumpkin seed sauce or pork based in banana leaves.

AIR SUPERIORITY

The F15 Strike Eagle is the latest in a long line of F15 Eagles, whose development began in the mid '60s. Originally conceived as an ultrapowerful, ultra-fast air-superiority fighter, the design has developed into an air-superiority fighter with ground-attack capabilities.

The F15 Strike Eagle is one of the fastest, most manoeuvrable, and most powerful military aircraft in the world. It has the capacity to carry the latest airto-air and air-to-ground armament in addition to its 20mm cannon.

The latest version of the Strike Eagle is equipped with a sophisticated zoom FLIR/TV/Laser target tracking system that allows the pilot to see close up views (either TV or thermal) of the target at all times.

We know them only as the coolest coders in town, the ace assemblers, the bigwigs of binary... but where did they come from? What force has made those Bitmap boys the dynamic demons of design that they are today? In an exclusive interview, The One magazine can blow away the cobwebs from the Bitmaps' murky past as Brian Nesbitt goes One On One with...

Mr. and Mrs. Bitmap

AY BACK IN THE MISTS OF TIME, in the secluded village of Wyrepiddle, a miracle happened. Mrs. Anna Bitmap (nee Log) gave birth to quadruplets: three bouncing baby boys and one girl. Both she and her husband, Bobby, must have had little idea that their sons. Eric, Michael, and Steven were destined to become superstars.

The three boys (and their sister, Belinda) led a quier but hard life in the village, attending the local school and later studying at the grammar school in the nearby town of Chipping on the Wold. It was there, perhaps, that the seeds of their stardom were planted.

Sadly at this time their sister Belinda (who many would argue was the boys' original inspiration, and could have gone on to be an even more famous developer than her incredibly famous brothers), perhaps feeling overshadowed by her brothers' success, was driven to despair and ran away from home to join the circus. Although she's thought to be alive and well, she was last seen performing as an anchor woman for a Sovier acrobatics team in 1978.

The other sadness in the boys' early life was that they saw little of their father. He had to rise at five every morning to begin the long journey to the Cornish tin mine where he worked, and he would never return until long after the boys' bedtime.

> However after much investigation, we managed to track down Mr. and Mrs. Bitmap, now

living in comfortable early rettrement in a cottage on the Isle of Lewis In the Outer Hebrides, and asked them about the Bitmap Brothers'

> formative years. BRIAN NESBITT: Did you have the remotest idea on that fateful day that your sons would grow up to become famous?

MRS. BITMAP: Ooh no dear, of course they were very special to me - Michael with his cute little chubby chops, Eric with his little plastic sunglasses, and ... erm, the other one with the long hair but I had no idea they were going to become special children for so many other people too. MR. BITMAP: We're very

proud of them ...

BRIAN NESBITT: Weren't you at all surprised that for quadruplets, none of your children remotely resembled each other in the slightest?

MRS. BITMAP: Ooh yes dear, even the midwife said to me: 'Well I never Mrs. Birmap, to look at your boys you'd think they weren't really brothers at all.' So I had a good look myself. 'Ooh yes,' f says, 'who'd ever believe they all came from my womb.' (Pardon my French.) Didn't I dear?

MR. BITMAP: Mmmph! What?... Oh yes,... we're very, very proud of them though ...

BRIAN NESBITT: Do you find it alarming that the boys are still playing games now that they're all grown up?

MRS, BITMAP: Ooh no dear! Well I mean, take my neighbour, Mrs. Molyneux, her little boy still plays with Lego. And those lads from down the road. Mark and Dominic, they're a lot older than my boys and they still get up to all sorts of pranks.

BRIAN NESBITT: Did any of the boys keep pets?

MRS. BITMAP: Ooh no. I wouldn't allow animals in the house. Not after what happened to poor Mrs. Mimer. Her son kept bringing home all sorts of nasty smelly creatures. Well I mean, have you ever seen the mess a dromedary makes on the carpet. Filthy beasts.

and Michael both cut theirs up to make into accessories for their action men. We're very proud of them though ...

BRIAN NESBITT: Was it a difficult time for you when the boys became interested in the 'birds and the bees'?

MR. BITMAP: Erm... no, not really, they are all nature lovers, and they all joined the Young Ornithologists Club. So, no, that wasn't a problem,... we didn't have to tell them anything at all., and we're very proud of them for that.

BRIAN NESBITT: Ah., well., what about girls then?

MRS. BITMAP: Ooh no, my boys didn't have anything to do with girls. Filthy beasts. No. no. I wouldn't let them go with girls at their tender age. Well I mean, have you ever seen the mess a dromedary makes on the carpet?

MR. BITMAP: They have been seeing that nice girl recently though. You know, the singer... Berry

(At this point Mrs. Bitmap fumbles around inside Mr. Bitmap's, shirt and pulls out a strange looking device with lots of buttons)

BRIAN NESBITT: That's a very unusual hearing aid ...

MRS. BITMAP: Ooh well that's because Steve built it you see. It was an amazing sight, he took a few odds and ends from his little tool kit, pushed his glasses further up his nose and disappeared into his room for about an hour. When he came out he was holding this.

BRIAN NESBITT: So how does this hearing aid work?

MRS. BITMAP: Ooh now this is very interesting. This button turns it on and off and this button controls the volume.

MRS. BITMAP: Well, we went down there recently.,

MR. BITMAP: Never again!

BRIAN NESBITT: You sound rather negative about the whole affair. What happened?

MRS. BITMAP: Well it was like this. When the boys won that award for Speedball 2 ...

MRS. BITMAP: Good heavens no. That came about from watching Millwall on the telly. This game was called Blood And Death On A Football Field or

something. It never got released, funnily enough.

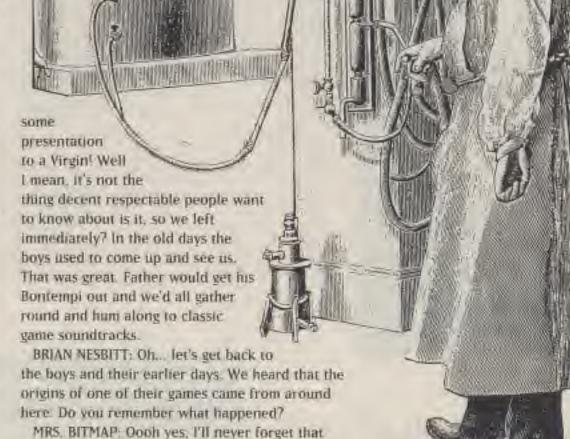

MR. BITMAP: They're still trying to get the stains out of that pitch.

BRIAN NESBITT: Have you any message you'd like to send to your sons?

previews, exclusive reviews and as many hints and tips as we can cram in.

We'll also be ADDING to the magazine by bringing you a whole wealth of entertaining articles that tell you exactly how to get the very best from your computer. And that's not even counting a special 24-page supplement that takes a close up look at the world's best home computer.

Remember: Double the value, double the coverage, and at no extra cost to the readers.

PARTY TIME To help

celebrate the changes happening to CU we've lined up a double disk of the best in Amiga entertainment, utilities and programs. For starters we've got A WHOLE GAME. Not just any game, mind you. Those lovely people at Mirrorsoft have given us GRAVITY, a smash hit and one of the best sci-fi arcade strategy games ever. Believe us, you ain't seen nothing yet! What's more we've also lined up a playable level of Core's brand new Ikan Warnors-type blaster, Warzone – a game that'll literally blow you away. On top of all that, we've also got lots of brill utilities that'll let you get the most out of

your Amiga. Learn how to program, create graphics and sample sounds – we'll help you unleash the power in your Amiga!!

Still in a party mood, we've also commissioned a 24-page supplement which'll tell you all you need to know about the Amiga. Each page will be crammed with useful information, tips and a run down on which software programs get the CU seal of approval.

WHAT'S NEW? We aim to

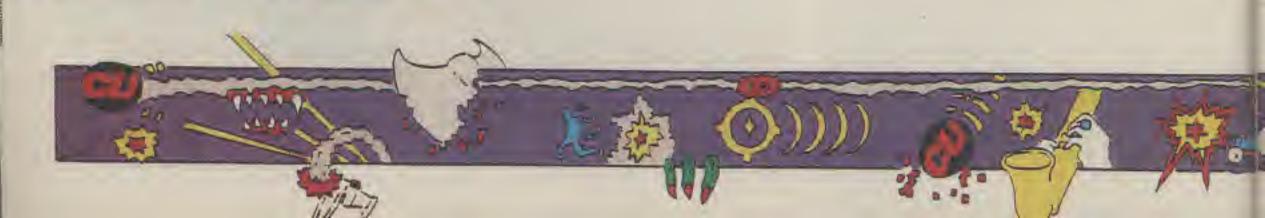

be the Ultimate Guide to the Ultimate Computer.

We're also going to make computing fun. Each month we'll be taking a look at all the new hardware and software packages in an authoritative and comprehensive manner. We'll guide you through each package, tell you how to use it in easy-to-follow guides, in a manner which will be ideal for the beginner and satisfying for the enthusiast.

AMOS

AMOS has quickly established itself as the top programming language for the Amiga. We'll be showing you how to get the most out of AMOS and keeping you informed of all new developments and updates. Look out for a special feature on AMOS 3D, soon to be whizzing its way into the softshops.

FOR MONEY

Q&A Got a problem? Then send your queries into our new Technical Editor who's a dab hand at solving anything from printer problems and virus infections to advice on the best memory expansions or DTP packages.

GRAPHICS We'll be taking a look at state-of-the-art graphics on the Amiga. We'll show you exactly what your machine is capable of and feature the work of top graphic artists in a fun section which will tell you everything you need to know.

SOUND Fancy adding a backing track to the game you've created on AMOS? Or sampling bits of music from top albums or CDs?

We'll tell you how it's done.

PD We've already got the best PD section in any mag, but it's just got better. From our next issue we'll also be covering all the best PD utilities – some of which are better than full-price software!

HARDWARE

From memory expansions to colour printers, each month CU will tell you which are the best buys and show you how they work. We'll be sorting out the good from the dross. All of our reviews will make compansons to similarly priced items, and we'll tell you exactly how useful they are.

CDTV Set to revolutionise the home computer. Commodore's CDTV will take Amiga owners into the forefront of the computer revolution. Each month we'll show you the latest games, the best software, and keep you up-to-date on just when you can get your hands on the CDTV expansion pack.

EDUCATION

The boom in education software has thrown up an increasing number of education programs. Our new review section will cover all the new releases.

PROJECT
3D Golf (Working Title)

PUBLISHER MicroProse

AUTHOR

The Thought Train: Lee Hodgson (Presentation, AI) Mark Davies (3D Graphics)

May 1990

RELEASE Summer 1991

"We're trying to simulate the essential things such as reading the golf course correctly and positioning the ball, rather than the way you grip the club."

Tim Roberts, Project Manager

YOU MAY NOT HAVE Faldo's swing, erm... Faldo's temperament and, let's see, the strength of, um... Faldo! But none of these is really necessary if you're to become the all-round golfer - at least that's the claim made by the people who are putting (geddit?) 3D Golf together. Doesn't all this sound a little familiar though?

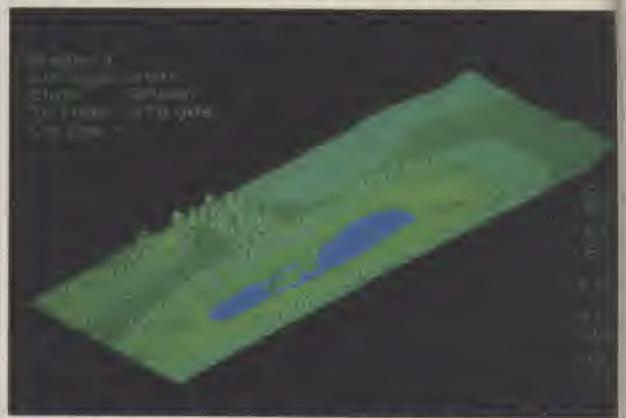

Tim Roberts, 3D Golf's project manager, doesn't think so - he reckons that MicroProse has a novel approach to simulating the pursuit of gentlemen: "What's unique about this game is that you experience a real landscape. What you get in virtually every other game are sprites and solid green going off into the distance. The 'true' 3D system in 3D Golf means that you get a feel for the contours of the land."

Using polygons and vectors to construct a course may be new(ish - after all, Gremlin's Greg Norman's Ultimate Galf and Access' imminent Links both use the same perspective), but more traditional methods arguably have one advantage: they look more natural. Nonetheless, what this one loses in graphical terms it gains in flexibility and realism: you can actually see the raised greens ahead of you and watch the ball bounce off a mound or roll convincingly down a slope.

Probably the most striking feature of this system is its camera view, which allows you to track the ball in flight - just like

NO GOLF GAME WOULD BE COMPLETE without the option to practice your driving and putting. 3D Golf's driving range not only allows you to spray the ball everywhere, but also gives you something to aim at - in this case a couple of holes. Getting the ball to land happily on the raised greens is particularly difficult: a high shot has to be spot on, while a low stroke needs exactly the right amount of pace.

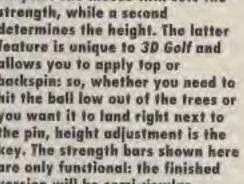

BEFORE EVERY STROKE you'll be able to examine a scaled-down landscape map of the hole. This gives an isometric view which can be rotated and viewed from four different vantage points, allowing you to carefully plan your shots. The red are shows the ball's current direction, but you can change the aim simply by clicking the mouse button on the spot where you want it to land.

WORK IN PROGRESS

PLAYING A SHOT couldn't be simpler: one mouse-click sets the strength, while a second determines the height. The latter feature is unique to 3D Golf and allows you to apply top or backspin: so, whether you need to hit the ball low out of the trees or you want it to land right next to the pin, height adjustment is the key. The strength bars shown here are only functional: the finished version will be semi-circular.

DESIGNER OF COURSE

THE GAME IS BEING DEVELOPED using DevPac, but the programmers have also created their own course editor. This is described as "an unwieldy creature", but if things go well, it could prove to be the next release after 3D Galf, Tim Roberts refined it, we could release it later on and allow people to create their own courses. It would be quite a substantial product in its own right," If this plan comes to pass, it's likely that a further six course designs will be included. After that, data disks are a possibility, "but we'll have to wait and see." Each course daes use the maximum amount of colours "given the landscape we're looking at, a fair number of them are shades of green." on the telly! The finished product should extend this concept

further: "We're hoping to have selectable camera usage during the game," Roberts explains. "At the moment you can replay and save shots from a standard viewpoint, but we're trying to create a customised system which allows you to position cameras along the course and view your shot again and again from a variety of angles. This

shouldn't be impossible, as cameras come fairly cheap once you've built your 3D world."

The game will be released on the MicroStyle label and, as with its stablemates such as RVF Honda, Stunt Car Racer and Air Duel, it's intended to combine 'fun' arcade action with the accuracy of simulation. Roberts elaborates: "We're trying to approach it from two sides:

simulation and gameplay. From the simulation point of view it has to look and feel as though you're actually on a golf course. For Instance, when the camera follows the ball you can see the landscape beneath you and understand how the course is made up.

ANOTHER UNIQUE FEATURE is the television-style 'camera tracking' system, which initially follows the ball in flight, then switches to an imaginary fan's viewpoint at the side of the fairway to trace your shot along the final few yards. The frame rate is maintained by simplifying the graphical detail - once the scrolling stops, full detail is reinstated. It's a technique already used in some 3D flight games, and it succeeds because you end up watching the ball rather than the background.

ONCE YOU'RE READY TO TEE OFF, you're given the standard view of the course from behind the golfer. At the moment he's just a silhouette designed to test the number of animation frames required - in the finished game this will be replaced by a full-colour re-touched sprite. You can make any last-minute fine-tuning to your aim here, and because the 3D is vector-based this doesn't involve lengthy screen redrawing - now that should be a bonus!

WORK IN **PROGRESS**

reading the golf course correctly and positioning the ball, rather than the way you grip the club. Even so, there are plenty of those kind of parameters thrown in, such as the ability to position your feet and, of course, club selection.

Naturally, you'll also be able to apply spin: this will largely depend on the position of your feet and selecting the right club, but the height of the shot is also important: "I haven't seen many other games where you can actually control the end result the program usually does it automatically for you according to the club you select and how hard you hit the ball. In real life you can control these factors to some extent by judging the height and looking at where the ball is going to land. If you watch golf an TV, you quite often see players aiming for high ground behind a pin and letting the ball roll back towards the hole."

Up to four people can play at once or, alternatively, there's a choice of 10 'ranked' computer apponents - each with his or her own playing style and performance characteristics. There will also be a variety of different game types: 'fourballs', 'singles', 'threesomes' and bestballs' should all be included. If you still want more, then the four difficulty levels should keep you smiling (as they make you anything from the kind of novice who hooks everything, to the professional who gauges the wind with an outstretched finger, selects the right clubs and finishes with a round of 61 every time).

The finished program will include six courses, two of which will be imaginary, but four will be based on existing courses in Britain and Europe (which goes against the usual trend of setting golf games on the other side of the Atlantic). Roberts explains

YOUR HANDICAP IS UPDATED ofter each round - with the rosults then accessible on your personal statistics screen. before he started this project, both Hodgson and Davies are keen golfers.

Handicap 28

This is their first major project, as Roberts explains: "They're fairly fresh out of college - they've done little bits here and there, but nothing substantial." The duo's future plans lie squarely in the games domain, but they want their next project to be a little less. serious. This time next year we could be keeping our eyes peeled for the last word in shoot 'em ups from The Thought Train...

AT THE MOMENT, holes are loaded in two at a time, cutting down on loading time and making disk-swapping negligible. The final disk count should be three: one for the program, one for the courses, and (probably) a supplied data disk. This data disk will be capable of storing 12 player profiles (in effect, a dozen courses per player), 12 games in progress and 12 shots - so, at last, you can prove that you really did get that hole in one. If you want additional storage space, the program has a facility for creating data disks of your own.

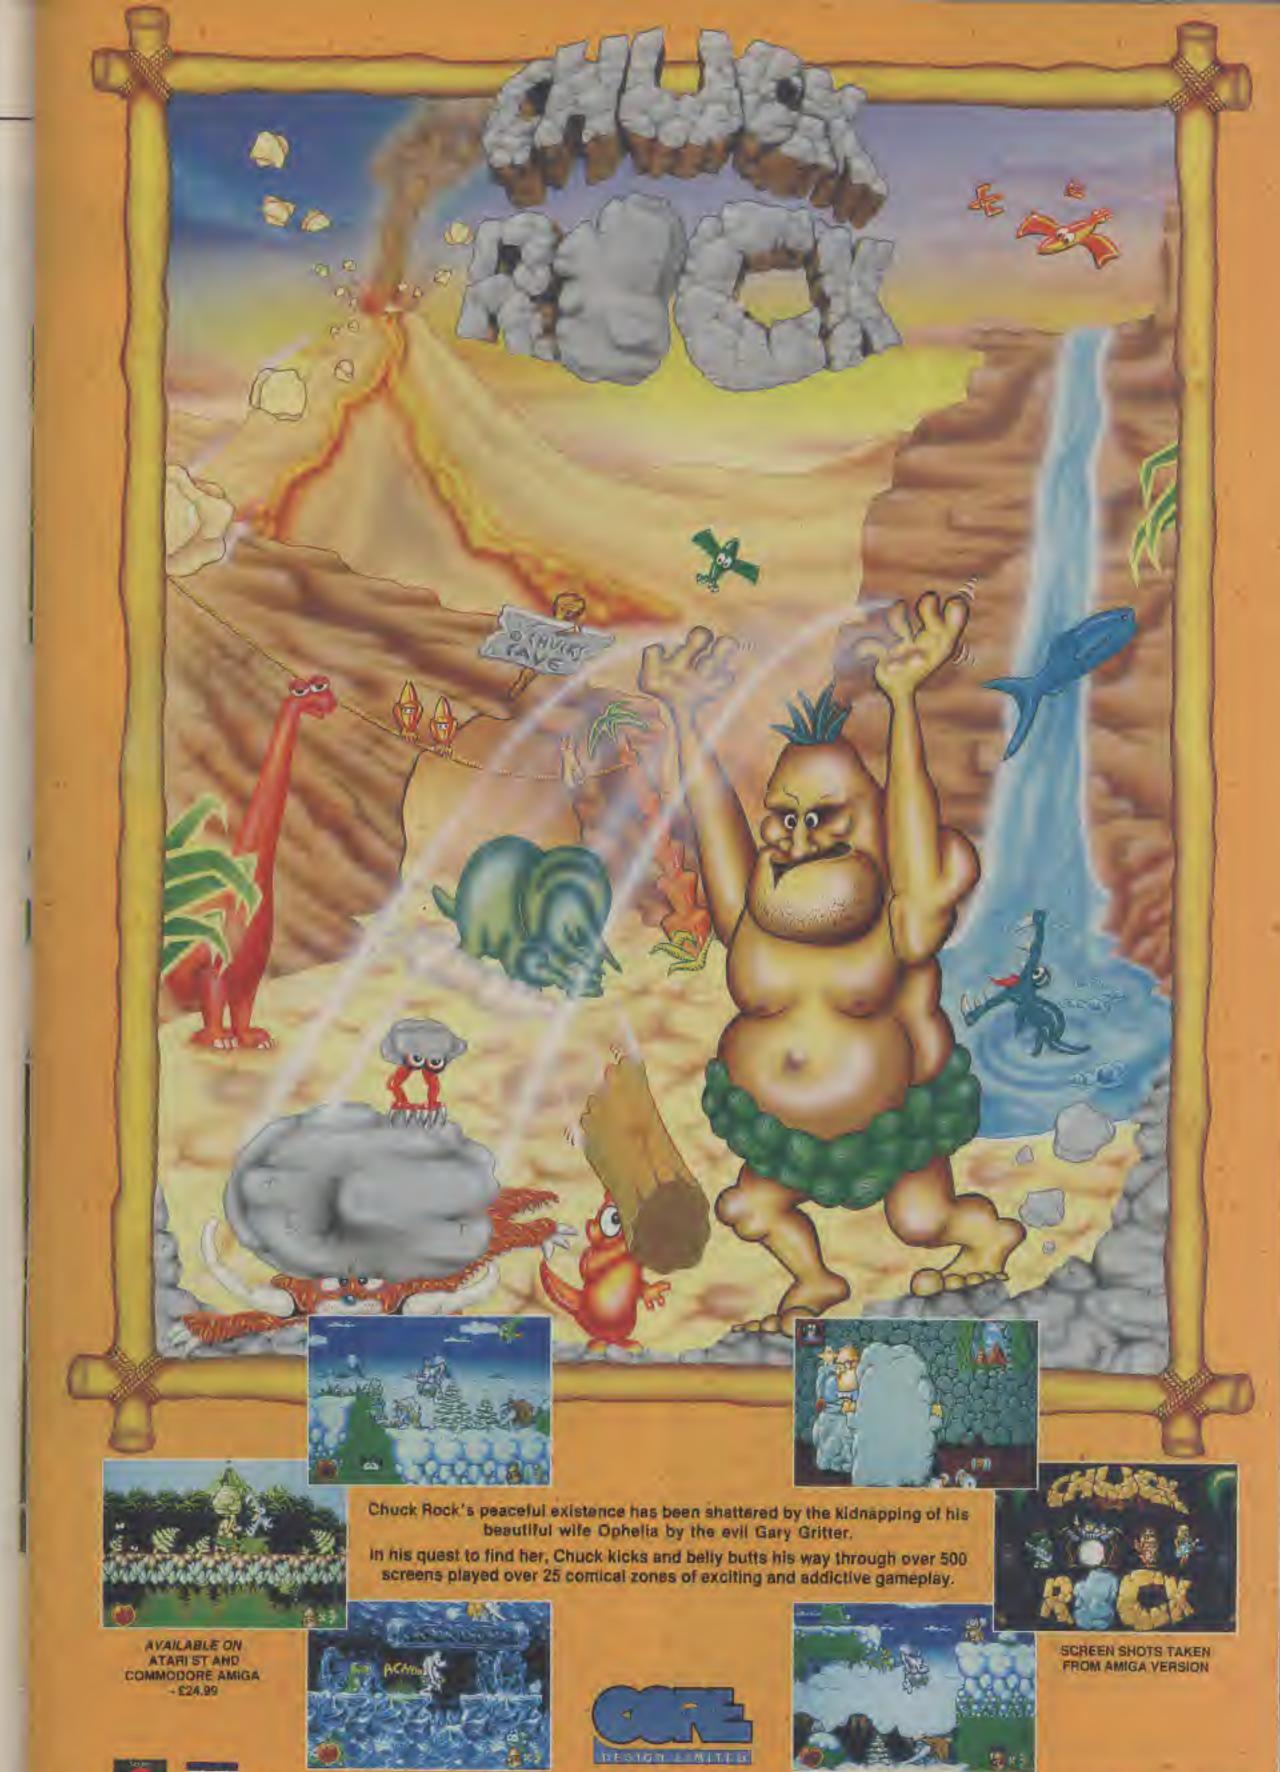

ONCE YOU'VE MADE IT TO THE GREEN, an unusual strength meter allows you to gauge the power of the shot. Straight putts on a flat surface only require the bar to be half-filled, so a downhill putt needs the lightest of touches and an uphill one needs that extra 'comph'.

THE COURSES WILL VARY in difficulty: some will have clumps of old oak trees and dog-legs, while others will feature lakes and other hazards - the easiest will just be wide open fairways with a couple of bunkers. "The aim is to avoid having six similar designs, because people will just go back to their favourite one time and again. This way you'll be able to start off with the easy tourses and work up to the nearimpossible ones."

AN ACCURATE WIND FACTOR is essential to the realism of a golf simulation - just look at those trees quiver. All right - you've guessed it - they're not moving at all! But they will: the code is already lurking in the program, but no icon has yet been designed to indicate strength and direction.

"We are writing the 16-Bit versions the way the arcade version should have been written."

Ronald Pieket Weeserik, programmer

SISTERS ARE DOIL

that is, if a revolution can be all fluffy, cute and nice, then this probably qualifies.

What we are dealing with here is an arcade game which features female characters that aren't clad in studded leather bikinis and brandishing phallic swards. Instead, Rod-Land's heroines are cute little fairies clad in pretty (and modest) dresses and armed with wands (okay, so the wands are a bit suspect, but you can't have everything).

The fairies in question, Tam and Rit, are a sort of female equivalent of Bubble Babble's heroes, Bub and Bob (who, of caurse, later made a reappearance in Rainbow Islands). The story which jollies Jaleco's coin-op along is that Tam and Rit's mum has been kidnapped and locked up at the top of the Maboot's tower. Understandably, neither of the girls is happy with this situation, so they pack up their troubles and set off to the rescue.

To help them in their quest, the village elders have given the girls the Rods of Sheesanamo: special wands designed specifically for monster-bashing. What's more, daddy has made each of them a present of a pair of Rainbow Shoes - handy items if a quick getaway is called for.

This more-or-less standard scenario sets the scene for a colourful platform romp where our two long-haired heroines are beset by a variety of creatures from the land of cute. These

item - with teeth). All in all, this promises to be one of the most delightful and playable coin-op

conversions of 1991. The conversion is being handled by Random Access, one of the most competent feams in the business, with titles such as Silkworm and The Ninja Warriors already under its collective belt. And according to Dutch programmer Ronald Pieket Weeserik, this conversion has been plain sailing compared to those previous games. "It's nice to do a game that the computer is capable of emulating," he comments. "Everything in the coin-op can be included and the finished game will run at the correct frame rate."

PLATFORM PROBLEMS

In fact, Random Access is not merely reproducing a near-perfect conversion of Jaleco's machine, it's actually haping to improve on it. "If you play the coin-op you'll notice lots of bugs," Weeserik points out, "such as enemies getting stuck at the top of ladders, the ability to slam enemies down on thin air, and not being able to zap things from ladders! These have all been corrected. We are writing the 16-bit versions the way the arcade version should have been written."

The slamming-down-anto-thinair bug occurs when either Tam
or Rit catches a monster at the
end of a platform. It's then
possible to swing the monster
over the edge of the platform and
slam it down onto thin air - try
this in Storm's version and the
monster will simply go hurtling
down to the next platform and
land with a thump.

you can see, the graphics are faithful to the original - and the whole thing is just as sickeningly cute. Note how Tam and Rit turn into little fairies when they die.

As well as the corrected bugs, eagle-eyed players will notice the inclusion of some additional screens - so even if you can play through to the end of the coin-op you should find this version more of a challenge.

MORE THAN MEETS THE EYE

SOMETHING THAT YOU WON'T FIND in the coin-op are hidden features and bonuses - because, unlike most modern arcade machines, Jaleco's baby is completely devoid of them. Once again, this is a deficiency that the boys at Rondom Access are anxious to rectify. These extras will probably only be revealed by use of special mode activation codes - and those of you who've really got into The Ninja Warriors will know just how bizarre Random Access' cheat modes can be.

NG IT FOR THEMSELVES

SOUND

WHILE THE TREND in modern coin-ops is to sample sound effects presumably to benefit from the more realistic quality), Jaleco has synthesised all the effects in Rod-Land. Weeserik is going to attempt to copy the results as closely as he can. In the spirit of general improvement however, he feels that several of the less suitable sounds might get replaced by something a little more palatable.

THE BOOTS ARE USED to create a portable ladder just where you need it. This can also be used by enemies though, as it stays in

place until you move it again.

GRAPHICS

GRAPHIC ARTIST NED LANGMAN has managed to get all of the original graphics into this conversion, but it hasn't been easy. The sprites were simple enough, but the backgrounds presented some problems. Jaleco had supplied a disk with the backgrounds stored as 16 x 16 pinel squares, jumbled up and in the wrong colours. Since there were about 500 of them in total, making sense of it all caused a real headache. However, one surprise extra that Ned did find on

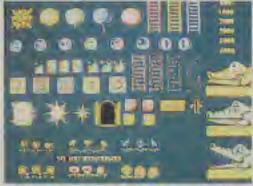

THIS IS THE EASIEST WAY TO BUMP OFF ENEMIES. Just grob them with your magic rad and bounce them back and forth until they turn into a weapon. This weapon can be left in place until it's needed and then activated to destroy further enemies and turn them into bonuses.

THE POLYMORF (OR SLEEPING BAG MONster) is a disgusting creature that slimes its way up to an unsuspecting fairy and then rolls its tongue out (yuk!).

SOME OF THE OTHER SPRITES, ranging from the bonuses left when enemies are destroyed with weapons to the cute troc' - what's he for? You'll just have to wait and see.

to encounter in the finished version.

Jaleco's disks was a set of animations that hadn't been included in the final version of the coin-op. There was an extra animation for each of the enemy sprites, showing, for example, the chick pulling a worm out of the ground or the rabbit eating a carrot. Rather than just use these willy-nilly, the team decided that they would be used to indicate when the monsters were about to change from their normal patrol mode to their attack mode. Remember you have been warned!

MAGINE BEING ABLE TO surf. skateboard, tackle a BMX course or chill out with your 'hackeysack'
- all under the blazing Californian sunshine... and all without leaving your bedroom!

Well the winner of this great competition will be able to do just that, as Atari is offering one of its all-new Lynx portable consoles, complete with Epyx' California Games as first prize.

The latest colour handheld to hit the market, the Lynx offers a 31/2" back-lit colour LCD display, built-in joypad and two-button control set-up, an AC adaptor and a 'ComLynx' cable so that up to 16 players can take part in certain games. Also, a clever piece of software trickery allows the screen to flip by 180°, so that the machine is just as comfortable for left-handers as it is for the rest of US.

The basic unit, that is the one which comes without a game. included, costs £79.99. In all there are 16 titles to choose from including the aforementioned California Games, Rampage, Rygar and Road Blasters, while a further 50 games are currently in development.

So how can this great prize be yours? Simple - just solve our Californian teaser and send your answers on a postcard (or the back of a sealed envelope) to: California Dreamin', The One, EMAP Images, Priory Court,

30-32 Farringdon Lane, London ECTR SAU.

Entries should arrive no later than Monday June 10th 1991 - and don't forget to include your full name and address.

is broken down further by the alternate appearance of flying (shoot 'em up) and walking (beat 'em up) action in each level.

But this isn't how it all started out. Optimus' original plans were for a similar game, but with only five or six levels - each of which could scroll both ways. However, this plan had to be dropped, as programmer Neil Hill explains: "We weren't happy with the way that the game was playing when we tried that - it was hard to predict what the player was going to be

able to do with the screen going both ways, so you tended to lose some of the gameplay."

However, a number of elements have remained throughout the game's development, despite the numerous changes - the most obvious of which is the winged horse sprite: project manager Jason Falcus takes up the story: "We were trying to get away from the usual space-based stuff that's in every other shoot 'em up and we knew that we could do something really special with a fantasy scenario. So we put

HE MAY NOT BE DIGITISED from LA Law's Narry Namilia or some other hunky TV hero, but this actually means that the boys from Optime have to put even more work into moving the main character when he's not astride his mythological horse. This character is still unnamed, although Persons, the current front-runner, looks like lasting the distance (apparently there's no mythological reason for this choice, it's just that Persous and Pagasus go well together).

THE WAY THE STORY GOES, your on-screen persons is being protected in his quest by a powerful wizard. So, when it looks as though you're about to pop your clogs, your guardian simply picks you up, revitalises you and pops you back down into the thick of things, as demonstrated by these sprites. Your benefactor may be powerful, but he's not God, so this process can only be repeated three times (what do you want, immortality?).

BECAUSE OF THE GAME'S UNUSUAL STRUCTURE, the end-oflevel guardians have been replaced by 'end of every tenth level' guardians, including this elaborate dragon.

BORING EVENINGS after work, project manager Ralph Stock likes nothing better than to get out a couple of packets of ready-salted crisps, grab a can of Loewenbrau and flick on the TV. As fate would have it, it was on one of these heady nights that inspiration struck: "I was watching a very bad commercial channel and wondered what sort of people could run that kind of TV station that's how the idea for Mad TV was born."

It didn't take long for the embryo idea to develop into a live and kicking game-plan. Appropriately, the staryline is so realistic that you could surreptitiously swap it with an episode of Neighbours and nobody would notice.

At the hub of the action are the madcap exploits of one love-lorn individual, Archie, as he attempts to ingratiate himself with the love of his life, Betty Botterblom, a devastatingly beautiful television announcer. By a stroke of astounding caincidence, Archie just happens to bear more than a passing

IN YOUR BOG-STANDARD BUSINESS SIM, a joke fits in like it would at a funeral. Mad TV, claims Stefan Hoffmann will be radically different. Why? Because: "It's got a sense of humour." The appearance of Betty Botterblom, a suitably zany soundtrack and more tacky jokes than an episode of Birds Of A Feather, are designed to endow the action with the maximum 'wacky factor'.

The consensus is that the key to the whole shebong is the cortoon-style of the graphics – and to this end Rainbow Arts has deliberately opted to use professional cartoonist Thomas Andrae, rather than a dedicated computer graphics expert:

Andrae's work normally involves producing the line-drawings for a popular German elephant cartoon and (his tavaurite) creating storyboards for a selection of advertising companies. His relatively limited computer experience was acquired more or less by accident: "I bought on Amiga about three years ago, saw an advert in a magazine and got tempted into doing a few bits of 'piecework' for a small software company." As luck would have it, his contact there was Ralph Stock, and when Ralph moved to Rainbow Arts, freelance Andrae followed.

EVEN WHEN YOU'VE GOT CARTLOADS OF CASH available, you can't always buy the top quality programmes you want. When a trip to the archive to search through your back-catalogue proves fruitless, it may be time to start creating your own shows. The studio is the place to do it - providing you've got enough space. If floor allocation gets too tight, you may have to kick out one of the huilding's other tenants - the laundry, for instance.

dozens of boring business. games, but most of those just have the players taking turns. Mod TV is interactive; the computer rivals play at the same time as the human player does. You can actually see them all walking around the skyscraper's floors and getting on with their individual jobs.

Inevitably, perfecting this kind of intelligent automation takes time. By for the most complex aspect of the programming process to date has been creating Archie's simulated opponents, which has taken

Christian Kramer several months' hard slog: "The trick," he confides, "is to make them so smart that you get the impression you're playing against a human being.

These digital villains have got to be at least as devious os you and reasonably fallible: make them

too clever and playing wan't be any fun, too stupid and winning just gets boring. Fortunately he had the Rainbaw Arts' in-house development engine to help him: "It's our own system, based on Turbo C++ combined with special graphics, sound and code libraries."

A large chunk of this technology has been directed at perfecting cartoon graphics and a simulated sense of humour, but according to Stefan these aren't the two primary development objectives: "What we're aiming for is playability. It doesn't matter how good the presentation is, in the end long-term motivation is what really counts. You've got to have good graphics, but the most important factor is that the player

actually feels there's a real world behind the game."

This then, is why he's tried to squeeze as many different features as possible into Archie's quest for the perfect TV company. It's also one reason why all the game's different sections have been squeezed into rooms in an interactive apartment building. If all the different areas were simply accessed from a static main game screen (as happened in a previous Rainbow Arts' strategy product, Oil Imperium, for example), you wouldn't get the same feeling of being a part of a genuine TV station's world.

Inevitably, all of this dedication ta serious realism hasn't been made without the odd personal sacrifice. For Stefan, along with the rest of the Mad TV team, night-time in the commune where he lives is now dedicated to hours of research: "We've all been watching cable for nights

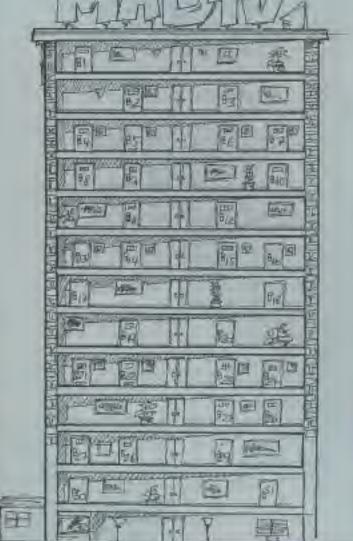

There's just one snag though... he hates TV.

YOU KNOW YOU'VE MADE IT when your portrait hits the top of Botterblom's wall. But watch out! If one of your rivals starts spending more money on Betty's presents, you'll start to get that sinking feeling. Crucial moments like these will be highlighted by an appropriately silly soundtrack developed by Chris Huelsbeck (Turrican and Turrican II) using in-house sound utilities.

THE MAD TV BUILDING isn't just a lump of sophisticated architecture - it's where Betty Botterblom, apple of your eye and love of your life, spends every single day. Doors lead off into among other places - studios, the film agency, the news office and the supermarket (handy for purchasing production props and the odd present for the love of your life). While negotiating this warren of corridors, lifts and friendly artistes, the on-screen statistics keep you constantly up-todate with the viewing figures, how much cash you've got and Betty's feelings for you. The two TV screens show you what's on (left) and the kind of audience that's watching (right). Be worned though, non-family entertainment generally gets lower viewing figures.

MOST OF MAD TWS GRAPHICS start out looking something like this. Andrew scribbles erhotener comes into his hand straight down on paper; their refines his original ideas on stream...

THE FINISHED VERSIONS may look rolatively. similar - or totally different. It all depends on exactly how inspiration strikes.

Although Mad TV is his first large-scale computer project Andrae's known exactly what kind of effect he's wanted to create ever since starting work on the main characters in

September: "I was datermined to produce something that was comic and funny. If you look at other games of this sort, such as Oil Imperium, the graphics aren't exactly what you'd call amusing. I want you to be able to play a game of Mad TV and smile. That's how you end up getting genuinely

Though Andrae likes computer games (Populous and Lemmings are current lavouriles), he doesn't exactly wax

lyrical on the potential of using a computer to create graphics. "Everything's a lot faster by hand; when I'm at my desk I've got everything I need." He prefers to draw everything freehand. doesn't make use of most of the computer's facilities and generally has a preference for good old-fashioned materials. "For me there's no real difference in technique -1 just draw with the mouse rather than with a pencil and that's it."

PROJECT Airbus A320

PUBLISHER Thalian

AUTHOR Rainer Bopf (Concept, Coding) Christian Jungen (Coding) Thorsten Mutschall (Graphics) Willi Carmincke (Project Manager)

INITIATED June 1989

RELEASE August 1991

"Basically we're saying: 'OK, you've coped with the singleengine machine in Flight Simulator, now fry something bigger.'

Willi Carmincke,

Project Manager

WO YEARS AGO at a German computer show Thalion's Willi Carmincke was approached by a middle-aged man clutching a disk. "He asked if I was interested in flight sims and when I said I was, he offered to show me his." What Willi saw astonished him: "Usually when you're buttonholed by someone at a show they just tell you all about the marvellous game they're about to slart programming, but it's once in a blue moon that you actually find someone who's practically completed one

"This man had obviously just spent a couple of years quietly programming in his room and he'd come up with something totally exceptional. I'd never come across anything like it and I don't think I ever will again." The genius in question was Luftwaffe professional Oberst Rainer Bopf, his game: a simulation of the Airbus A320. As a result of their meeting, Bopf and Carmincke struck a deal

Rainer Bopf is an active Luftwaffe pilot who learnt to program back in 1965 (in those days they were still working with punch-cords), when his professional involvement with military radar systems sent him to America. Over the years he's

clacked up over 2,000 flying hours in a huge variety of planes and in Germany his rank, Oberst, is just one rung below general. His personal experiences are all based on actual journeys in real planes, so it's not surprising that his primary criterion for a good simulator is realism.

Airbus A320 aims to be a technically

accurate flight simulation written by a pilot to a standard that pilots will enjoy - anyone who's

expecting a Falcon-style extravaganzo that's simple to pick up, pretty to look at and easy to put down is in for a disappointment.

In fact, Bopf, who has made a hobby out of simulations, has flown Falcon as well as various MicroProse games - but for him, the flight dynamics just don't feel right. "All I'm doing is sitting in front of some

screen while the on-board computers do the flying - and I always get disappointed by the navigation, what the plane looks like or the fact that it hasn't even got flaps to land with." Airbus is aimed at a more specialised audience - the kind of people who share Bopf's enthusiasm for the original of the breed, SubLogic's classic Flight Simulator.

Carmincke elaborates: "Basically we're saying: 'OK, you've coped with the singleengine machine in Flight Simulator, now try something bigger.' In one way, anyone who's familiar with SubLogic

000000 THE EOCKPIT. II doesn't take long to comprehend the purpose of the controls (both joystick and keyboard options are available), but learning to muster them takes hundreds of dedicated flying hours. On every journey the appropriate data has to be entered into the LLS using the table on the

WHATEVER ELSE IT MAY BE, a pilot's life is never dull. While most sensible people are at home and tucked up in bed, you're coping with the harshness of the elements and a forbidding night sky. It's tough owning a flight sim!

should find it easier because the games have similar navigation systems. What's new about it is the Airbus flight experience

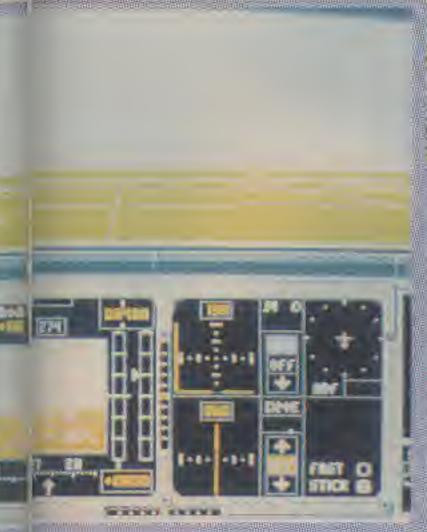

Right from the start, Bopt's objective was to create a 'civilian' sim. He picked the Airbus because, as a piece of engineering, it's always had a special fascination for him. "It's such an innovative machine," enthuses Carmincke. "As it's totally computerised, the pilot is really more of a software monager.'

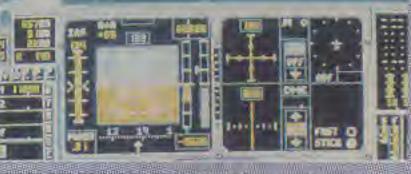

This might lead you to believe that Thalian's simulation actually lets you fly by wire - not so! What really intrigues Oberst Bopf is what happens when you turn the computers off. All the controls in his Airbus are operated manually - the only real exception is the auto-pilot for the Instrument Landing System (ILS) and if you want to get good assessment marks, you even have to switch that off!

The finished product will feature Bopt's original flight dynamics combined with a few new Thalion touches. A career writing routines for radar hasn't given Bopf the most thorough grounding in vector graphics, so that's where Christian Jungen, Swiss programmer and polygon expert, has stepped in. Jungen is

SUPER SONICS

In line with the general tone of the simulation, the sound's emphasis is heavily on function. Authentic engine noises are already implemented, but the final version will sport acoustic cockpit warnings alongside effects to mark the movement of landing gear and Haps.

THERE ARE NO SHORT CUTS to a quick promotion. What storts as a routine flight may throw up all sarts of unforeseen emergencies - and the higher your rank, the tougher these unexpected difficulties get. Navigation instruments may suddenly stop working, weather reports can prove inaccurate and you sould find yourself coping with nit visibility on airport approach. Crises like these are pilot-building. Fail the test and you've learned a saluable lesson; succeed and you're gaining the kind of experience that could pur you in line for Boof's job.

AS YOU MAKE UP the required flying hours you get a bird's eye view of Europe's lamous alreads - each one a scale presentation of the roal thing (today's duty-flight gives you an apportunity to admire Cologno). Training not only gives you the chance to pick your own sightseeing trips, it also helps you to get to grips with the two most vital Airbos skills - navigation and sleap take-off and landing techniques.

THIS IS A SERIOUS FLIGHT SIM, so you don't get the usual number of panoramic internal and external views. In any case, just looking out of the window is no way to navigate. Airbus includes approximately 120 different airports, each one equipped with ILS facilities. "And that's not just in one direction. When there are six different runways you get six different ILS directions." For added realism, the packaging includes the relevant charts in a copy of the official Jeppesen handbook as used by professional pilots.

IND SIMPLE

also contributing to the landscape detail and helping Bopf in the scanning of the flight territories.

When everything has been fully implemented, hopeful pilots will have the chance to struggle through five progressively more difficult levels simulating a career from student right through to Chief Pilot. This innovative structure was Thalian's idea. Oberst Bapt's personal preference is for total flight freedom, SubLogic-style, with no assigned duties or schedules of any kind, so, in the interests of

BEFORE DEPARTURE, you're given a brief weather report, but just like in the real world you can never predict quite what conditions will be like. To minimise the element of surprise, 'Training' mode allows you to set your own meteorological conditions so that

you can practice dipping in and out of cloud cover like this before you put possible promotion on the line. compromise, that option has been included too.

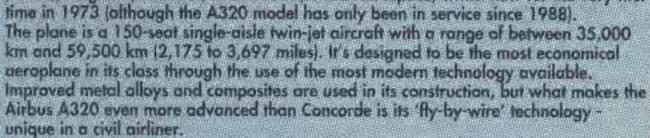

For free spirits there's a totally unrestricted training mode - fly any place, any time, anywhere under weather, wind and visibility conditions specially defined by you. Career pilots, on the other hand, have carte blanche to go all out for promotion from day one.

There are even plans to create 'Thalian Airways', with users becoming automatic employees once they've purchased a copy of the simulation. The plan is that 'pilots' should notify the airline of their promotions and will receive some kind of medal in return. Carmincke is enthusiastic: "We want to keep up with all our pilots until they make it to Chief."

Thanks to some co-operation from Lufthansa, the criteria for promotion are exactly the same as those demanded by the real thing. A pilot's duty-flights are

THE REAL THING

THE AIRBUS, THE FIRST MEDIUM RANGE 'JUMBO' JET, is a totally European aircraft. It's the product of a collaboration between companies from France (Aerospatiale), Germany (MMB), Spain (CASA), Belgium (Belairbus) and Britain (British Aerospace) which flew for the very first

All of the Airbus controls are driven primarily by computers: these include an automatic guidance system (the alpha-floor) designed to detect dangerous 'microbursts' of wind at the critical phases of landing and take-off. The object of this is to cut down the pilot's routine workload and increase the overall safety of the peroplane.

Two new Airbus models are currently in development. The A330 is a high capacity medium/long-range wide-body aircraft (328 seats) with a range of 9,300km, while the A340 is a four-engined long-range aircraft (262-294 seats) with range of 13,200 to 14,300km.

IN-DEPTH OR NOT, these days a flight sim just has to have impressive presentation graphics. Designed by Thorsten Musschall, the pre-mission razzmafazz includes a meeting with your Chief Pilot, a weather briefing and a point-by-point duty rundown.

organised according to Lufthansa schedules. You'll have to cope consistently well with everyday duties and checks, react quickly under adverse weather conditions and confirm your ability to hold a licence regularly. And according to genuine Lufthansa regulations, it takes around 400 to 500 flying hours (evaluated at a quality of 75 per cent and higher) to make it to the top.

Lufthansa wasn't the only official organisation to contribute, as Carmincke explains: "Herr Bopf said he'd simulated the Airbus A320 and

we thought it was important to actually call it that, so we presented it to the plane's manufacturer." And it wasn't just the flight dynamics that met with the Airbus contingent's seal of approval: Oberst Bopf ultimately got the

thumbs-up for

his whole approach. Keen to get away from the image that civilian pilots just sit at the controls and let the machinery do the rest, several admitted that they prefer to switch the onboard computers off just for the pleasure of taking manual control.

Other professionals loo, have tried it and enjoyed it. Airbus gained praise for flight dynamics and scenario from another old Sublogic fan, the spokesman for 'Cockpit' - the official pilot's organisation in Germany - as well as from several German pilots. Meanwhile Oberst Bopl is using what spare time he has left to whittle away at another simulation program. This time it's

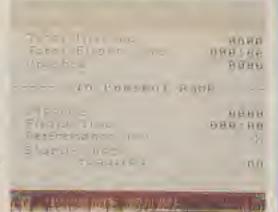

a civilian helicopter game with a rescue scenario that has you racing to serious accident spots on highways and in the mountains, searching for the injured and rushing them to

Carmincke is clearly impressed: "One of its advantages is that we can use exactly the same landscapes as in Airbus, though obviously the game area will have to be smaller and there'll have to be more detail." Expect to feast your eyes on that early next year.

BRITAIN COMES COMPLETE with 25 airports including the obvious biggies: Birmingham, Luton and Heathrow. It's a measure of the sim's accuracy that exactly where you can touch down in this green and pleasant land is currently a subject of hot debate. Followers of British flight history would no doubt enjoy the chance to land at the more famous airports such as Biggin Hill. Unfortunately most of them aren't equipped with the ILS facilities that would make an Airbus landing possible. Oberst Bopf wants to stick with roulism - Carmincke feels there's a case for overriding the facts, just for nostalgia's sake: "OK, so the Lufthansa will never fly to Biggin Hill, but it would roully be nice to be able to." The resolution will probably be a compromise - the old airports won't

feature on duty-flights, but you might just be able to fix a quick nostalgia trip in training.

THE LOGBOOK - a personal chronicle of your career as an Airbus pilot, complete with details of duty-flights and number of hours flown.

AIRBUS IS PROBABLY THE FIRST flight sim to offer an extensive simulation of European airports. The flight-arena covers the UK, Denmark, France, Austria, the Benelux countries, parts of Italy and a topically reunified Germany. This provides its own peculiar challenge. Technically, navigation facilities in areas of what was once East Germany are relatively primitive. In reality, only former East German pilots fly there for the Luftwaffe (they're the only ones who really know what's what) so a simulated trip to Leipzig, say, can make for a very interesting and

ON COMPLETION OF A FLIGHT you get a read-out of your performance. The assessment is based on the most crucial aspects of your trip: points are awarded

for such vital factors as the smoothness and position of the landing, fuel calculation and vertical speed. To make the grade as a career pilot you'll have to consistently store more than 75 per tent.

AIRBUS AIRBRUSHED

HE MAY BE A DAR HAND at High dynamics, but heaters, palygour and scenary aren't among Oberst Bup!'s strong points, so these arophics are all Committy in the process of being updated by fliation, by the time Airbus A320 is released. In addition to all the relevant airports and runways, it will also soon all of Europe's major rivers (the Thins, the Laire, the Thamas ear) and all cities with

One are the few reasts took forward to is should get. In over the impression of large geographical frames to such as parents or fields that Carminake is adaptated from the second of the body and whistles just for the sales or it. "We want to confine cursoloss to

Instead, the Thalian room is working on the problem of introducing features such as mountains at their correct height. "In the Airbus you've got to fly 10,000 feet before you can hit 250 knots - so naming dangerous could actually happen." The main thing is to create a world that's recognisable even of the Airbus ceiling of 40,000 feet. Carmincks estimates that it'll take about three years, to perfect mainly because all of Herr Bopt's landscape routines will have to be rewritten. Adding delaif to the world as it stands won't work It would just make the scralling serky.

WHAT'S TICKLING THE TEAM?

YOU MAY HAVE NOTICED that there are two new names on the playroll for this worth Heather Perry has joined us as Production Editor (from now on she will be making sure your mags reach you to tip-top condition), while our new

designer is Gordon Barrick. He may be new to The One, but he's certainly not green when it comes to games. So here's a big The Cma welcome to both of them.

CIARAN BRENNAN

Being from Ireland our Ed is no stranger to the little people. Not surprising then then he's quite taken with Ocean's Elf. In fact he's been playing it so much it's a wonder that he's lound time to get stuck. in to his other tayourite nesecomer, War-Zone. Tedibus journeys have been whiled. away by fielding with his Gardeboy, this month, the Ed has mastered Double Duggon and Billion Kid

GARETH JONES

Our Art Ed has been struggling to get away from his Macthis month for his customary game of Kick O# 2. But be's compensated by improving his mouse skills with the odd game of Crystal Quast. The copy of Space Quest IV he's just installed is still waiting to get a look-in; but its time will come.

LAURENCE SCOTFORD

Logical has been responsible for keeping. Laurence locked up to the games room this month, and he's also been busy designing himself a better life with Domark's 3D Construction RP. Even so. there has been time for the odd game of Crystal Quest on Backgrounien on the Mac.

PAUL PRESLEY

Our own F.P has, rather appropriately, been playing with P.P. Hammer And His Pronuntte Weapon (Bicky him), but he's also been indulging his passion for all things adventurous by fooling around syith Gremin's Hen Duest.

JOOLS WATSHAM

Young jools has been mighty busy with the joystick this month, with Gods getting ius vote as the best platform bash. knocking around at the moment Operation Smalth is providing his Adventure hor, while he relaxes with Arnold Palmer's Golf on the MegaDrive.

HEATHER PERRY

Heather is a newcomer to the world of computer games, so we've not yet found. her staying late to finish the last few levels of Lemmings, for instance. She's been evening up Tetris though ...

GORDON BARRICK

Powerful and heroic(sh), Gordon has been whiling away his time with Hero-Quest and Powermorger, He tooks strange in the office in full battle dress though!

OU'LL NOTICE THIS MONTH that our VALUE rating has been changed to DURABILITY. This, we feel, is a better way of describing the qualities of the game that are summed up in that rating. Otherwise, it's business as usual. Following the reviewers' comments, the games are left to speak for themselves. Relevant screenshots illustrate the game's features, while the ratings, price, and release date are encapsulated in an easy-to-digest form. What more could you possibly ask for?

From the same stable that brought you the wacky humour of Zak McKracken^(™) and the superlative skills of Indiana Jones And The Last Crusade^(™) comes yet another masterpiece.

H, TO BE A PIRATE. To sail the high seas, sword in hand, patch on eye, parrot on shoulder and wood on leg. That's the life for young Guybrush Threepwood, who has never wanted anything more than to be spoken of in the same hushed whispers as Long John Silver, Captain Hook and Bluebeard.

Unfortunately Guybrush's home town - Melee Island^(TM) - is in the midst of something of a buccaneering depression. Pirates have become very safety-conscious, due to an evil spirit known as LeChuck roaming the seas between Melee^(TM) and the mysterious Monkey Island^(TM) in his ghoulish galleon, killing everything and everyone he comes across.

And as if that wasn't enough to hinder a young pirate-wannabe's progress, the PTA (Pirate Tenant's Association) has demanded that our hero complete its three tests of thievery,

sword-playery and treasure-huntery before they'll even let him apply for membership. Should Guybrush pass all three of these, then, just maybe, he'll be able to discover the secret of Monkey Island^{IMI}.

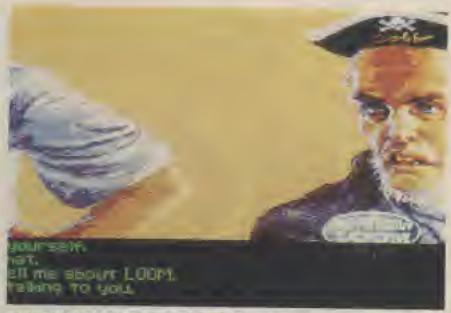

LUCASFILM BUFFS will be familiar with the now legendary SCUMM (Script Creation Utility for Maniac Mansion^(TM)) interface. What they won't be familiar with is a new touch, which proffers the most useful verb when an object is highlighted.

THE ISLAND OF MELEETM is ripe for exploration. Such notable landmarks as the Fettucini Brothers' Circus, Stan's Used Ship Yard and the Governor's Mansion all provide Guybrush with hours of mirth and fascination.

THE SECRET OF STANDING STANDING STANDING THE SECRET OF STANDING STANDI

THE INHABITANTS OF MELEE ISLAND(TM) are a colourful lot who like nothing better than to offer helpful advice and unbiased opinions. Either that or they'll use any excuse to promote a Lucasfilm product.

NO PIRATE STORY WOULD BE COMPLETE without a few buckles being swashed. However, in a slight break with tradition, it's not what you know but what you say that wins these fights. Instead of cutting your opponent with your sword, cut him to the quick with a witty insult and watch him surrender.

AT KEY MOMENTS IN THE STORY, a short interlude takes place detailing events taking place off-screen. Not only do these provide an enjoyable break from the often frenetic action, but they also help to further the story.

THE SECOND PART of Guybrush's quest takes him to the high seas en route for a date with fate on Monkey Island This trip is far from plain sailing, as you have to contend with mutinous crews, terrible food and a leaky hold. Luckily though, there's hardly a shivering timber in sight.

THE THIRD, and penaltimate, episode of Guybrush's tale takes place on the (abled Mimkey Island To. h's a lot larger (and hotter) than Melec Island TM and the locals are a lot less friendly.

ONE OF THE MANY STRANGE

SIGHTS to be taken in on Monkey Island (Thi) is this unusual modern-art statement, hewn in stone. As you've come to guess by now everything serves a purpose (even the rubber chicken with a pulley in the middle), perhaps that hollow section offers a clue ...

GUYBRUSH'S TRAVELS don't just remain above-ground - under the surface of Monkey Island (TM) are the fiery

catacombs. The problem here is that passages are constantly shifting due to the heat, so maps become useless.

LECHUCK'S SHIP is alive with dead pirates(1). However, while the spirits continue to party, Guyhrush has more urgent matters to contend with - not being seen, for a start.

THE CLIMAX OF THE QUEST takes place back on Melee Island 740, at the wedding of LeChuck and the Governor, It must be stopped, but how? Only one man can stop them now, Gaybrash Threepwood, pirate, adventurer, romantic and all-round good guy.

MORE SECRETS FROM MONKEY ISLAND

JUST WHEN YOU THOUGHT that it was safe to be a pirate again.. LeChuck's back and he's out for revenge. The Secret Of Monkey Island If IM (a proper name has yet to be thought of) brings back most of the original rost, takes Guybrush across many different islands and tells jakes even warse than those in the first

Digitized artwork is the current fashion amongst American adventure. programmurs and Lucastilm isn't a company to be left out. Each of the screens in the sequel is an original piece of airbrushed artwork, digitised, tourhed up and generally mutilated to bring to life Guybrush's world of walked planks and grog swilling pirates.

The sequel is still a long way from completion, but thanks to the response that the first game received, it should be one of the biggest releases Lucastilm has ever had. Its only main competition should be the next in the Indiana Jones series (see news).

SINCE THE FAR-OFF DAYS of October '89, there hasn't been an interactive adventure to beat Indiana Jones And The Last Crusade^(TM). Neither the silky graphics of Delphine, the sheer size of Sierra nor the complete absence of Infocom have been able to match the fun and excitement that indy generated. However, The Secret Of Monkey Island Mis about to change all of that. Lucasfilm appears to have taken all of the elements that worked in its previous releases and, not only incorporated them into this tale of scurvy swashbuckling, but even

improved on them in the process! A hilarious storyline, strong characters and an intriguing setting make it impossible to fault the gameplay, while even the nearperfect SCUMM(FM) control method has been improved. If I do have one gripe. it's with the graphics. Although they're detailed to the point of perfection, the animation slows nweb tremendously

when there's a lot happening on-

the 'micro movie' currently available only a truly would dare miss it

screen. Add to that a somewhat jerky horizontal scroll and a fair amount of disk swapping and you've got the faults wrapped up. Everything else works fine. The Secret Of Monkey Island is further proof that the Americans rule the micro movie world, with Lucasfilm once again showing the rest of us how to do things - and how to do them well.

With games getting bigger and bigger with every passing month, Ocean has taken a new track by making its hero smaller. But is it good for his 'elf?

Oceanare about as rare as someone winning the car on Bullseye, but when the Manchester Maestros do pop up from behind their movie and coin-op cover, the results are often better than the games with famous names on the boxes.

This arcade adventure, programmed and developed by Nirvana Systems (see the Work In Progress in Issue 30) is just such a case. Its basic format isn't new by any means, but it's just about as good an example of the type as you're likely to see, incorporating many of the best ideas from previous games of the style and adding just enough new ones to keep the pot boiling.

The story is about the most hackneyed part of the whole package though. Your character, a young Elf called Cornelius, takes it upon himself to fight through eight hostile environments to rescue his girlfriend, Elisa. This poor unfortunate creature has been kidnapped by the unspeakable Dark Lord, a mad scientist who whiles away the hours in his ghastly forbidding castle high above the elves' village by performing cruel experiments on any unfortunate creature who comes into his grasp.

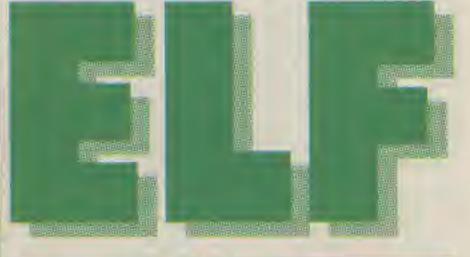

To help him get on top of things, Cornelius is wearing the magic ring which has been passed down through countless generations of his family. At first this only fires a basic spell, but it can be upgraded at the many magician's shops (you didn't know that most magicians are shopkeepers, did you?), where the pint-sized adventurer can also turn himself into a hero (which means that all shots bounce off him) or a wolf (so that he can fall any distance) and pick up countless other aids - as long as he has the right cash of course.

Don't take too long browsing though, Elisa is at this moment being lowered into a vat of some disgusting bubbling chemical - and what's more... the Dark Lord's laughing his head off.

A QUICK GLANCE at this, the initial forest level, will tell you little more than that this is an arcade adventure, but there are a number of subtleties which set it apart. Firstly, it's not just a matter of moving from screen to screen shooting everything that you see - unless you meet the right people, carry out the right actions and find the right objects, you may not even find balf of the landscape! Also, it's not a good idea to shoot the 'nicer' creatures: kill too many butterflies, hedgehogs, bunny rabbits or the like, and this can adversely affect your final 'cuteness' rating - which in turn may mean that you don't see the full end sequence when you do finish the game.

SHOULD YOU ENCOUNTER A USEFUL OBJECT or character, a small 'thinking Cornelius' icon appears in the bottom right of the

screen. At this point, pushing up on the joystick (or pressing Space) reveals an interaction screen (inset) where a number of functions including 'give', 'bribe', 'identify' and so on are accessed. You can even 'talk' to the character you've encountered, but only in single words as the 'parser' is quite limited.

EACH LEVEL HAS ITS OWN particular graphic style - here, in Level Two's rains, you find yourself in the catacomb-like dangeons fighting off mummies, rats and other subterranean horrors. Further exploration will take you through the lake, a swamp, the 'dwarf caves', over snowy mountains, into the castle dungeons and finally into the Dark

THE DARK LORD has sent his most trusted benchmen to try to put a stop to Cornelius' progress - as you may have guessed. they appear at the end of each level. Initially quite dim, these boys get better and better the further you get into the game.

Lord's castle itself.

THE SWAMP SECTION IS BLESSED with some of the finest graphics in the whole game - check out those reflecting pools.

ANOTHER PLACE TO INDULGE in a little interaction is the shops once again this isn't a new idea, but, as ever, there have been a couple of twists included. Ell's currency isn't money - it's pets - cute creatures which are found dotted about the landscape. But even having a plentiful supply of these isn't enough: anything that you buy is actually concacted on the premises by the shankeeper from a mixture of herbs (which are also collected on your travels), so as well as having the right amount of pets in your

pocket, you also need the relevant flora and fauna. The merchandise on offer includes four different types of shot, a flying machine (which can only be used in certain parts of the game), mystic mail (chain mail that is, not letters) and tips - which are the biggest waste of pets since vivisection.

WHO'S TURNED THE LIGHTS OUT? No matter bow many people you talk to; fires you light or owls you bribe, there are still a few screens that you're never going to see... unless you really search. The bonus screens are very difficult to find, but it's well worth trying as they offer up plenty of rewards - completely free

A GOOD ARCADE ADVENTURE is a joy to play - unfortunately you could count the amount of good arcade adventures that have been released in recent times on the fingers of one of foot. Thankfully, Elf puts this situation right. OK, so the actual gameplay isn't going to win 1991's Most Original Game Idea award (if such a thing exists), but as long as the gameplay's there, then total originality isn't absolutely essential -

and there's no shortage of gameplay here, If exploring and shooting's your thing, then there's enough here to keep you happy 'til the cows come home (and even until they've been milked and sent back out again), however if you thirst for a little more depth, then follow me. In order to get the most out of Elf, the puzzle-solving element is at least as important as the action (if not more, it's difficult to decide). And while the puzzles range from the childishly simple to the infuriatingly obscure, there are enough hints dotted around to allow you to complete every one. In fact, some of the levels are almost completely puzzle- or maze-based (one flendish section sees you tackle the problem of getting a series of moving platforms to move just the way you want them to, no easy task) while others increase the carnage

to compensate. And If I've given the impression that there are no new ideas at all in here I apologise how about these for

beautiful hidden depths

starters? Whenever you die, a gravestone appears in that spot from then on to mourn you. Then, if you pass that way again, chances are that your own ghost will rise up to have a pop, also the option to only save the game at the end of each level means that cheating is more or less out of the question. It's a pity that you can only have either music or sound effects playing at any one time (apparently, this is due to Ocean. France's custom-built sound software), but the fact that that's the only real fault I can come up with speaks volumes.

REVIEW

Can Spectrum HoloByte repeat the massive success of Falcon, or does its 'simulation of a novel' lose something in translation? Kati Hamza investigates...

FLIGHT OF THE INTRUDER Spectrum HoloByte PRICE 200 OUT GRAPHICS SOUND PLAYABILITY DURABILITY

HE DATE IS LATE 1972. The Americans are embroiled in their last real push of the Vietnam War, the Linebacker Campaign. Its objective: to force the North Vietnamese back to the peace table by concentrating pressure on vital military installations and supply lines. Flight Of The Intruder, which has been available to PC users since late last summer, thrusts you right into the thick of the action of that campaign. Unusually for a flight simulator, this one isn't based on a single plane - or even a specific type. Instead, it's a rendition of a bestselling novel/film (see panel).

Based on a carrier at Yankee Station, you choose from two lean, mean war-machines: the A-6 Intruder bomber or the F-4 Phantom, its escort fighter plane. Up to eight planes can take part in any one mission: thanks to a highly flexible auto-pilot, you can switch cockpits mid-action and fly any one of them at any time. Alternatively, for those of a more strategic bent, there's the option to play Commander Air Group (CAG) and take responsibility for planning a mission (targets, route, timing and actions) from scratch.

A SELECTION OF 13 OPERATIONS offers a variety of individual plane missions. These include Wild Weasel (suppression of SAM and AAA sites), MiGCAP (Combat Air Patrol against MiG excursions) and Escort duties.

IN THE REAL WORLD, both Intruders and Phantoms are flown by two people; the simulated versions. sport standard lookdown cockpits (instruments arranged in the traditional T-shape) modified for one For serious fliers, the packaging contains tables which allow you to calculate optimum speed,

beight and dive angle when launching bombs. If that sounds about as interesting as jotting down train numbers though, you can always switch to auto-pilot.

YOU'VE PLAYED THE GAME... NOW READ THE BOOK

FIRST PUBLISHED IN 1986, the novel of Flight Of The intruder spent 28 weeks on the New York Times' besiseller list. It's based on Stephen Counts' career as an intruder pilot between 1971 and 1973.

The action follows the exploits of one Lleutenant Jake Grafton, an Intruder pilot, based on the USS Shiloh, as he attempts to come to terms with the fact that his buddy Morgen died during a seemingly pointless mission. It forces. Cool Hand. Grafton to confront his emotions about the war as a whole, until grief and guilt drive him to take on single nanded the biggest target of them all - Hanoi.

It's a fast-moving account of the war from an insider's point of view packed with anecdotes about fuel shortage, equipment failure and avoiding death by the skin of your teeth. It's the lend of stuff that movies are made of - which is why Paramount Pictures has created its own version of the story starring Brad Johnson (Always) as Graffon, Willem Datoe (Platoon, Mississippi Burning) as his bombardler Virgit Tiger: Cole and Danny Glover (Lethal Weapon) as squadron leader frank. Camparelli.

NERVOUS ABOUT COMBAT? Then pick your hardware carefully. There's an impressive array of weapons available for both planes - the choice includes two anti-rad missiles, four iron bombs (released singly or on ripple), plus Walleye laser-guided missiles and Paveway laser-guided bombs. Choose the Phantom and you also have several air-to-air weapons (the heat-seeking Sidewinder among them) at your disposal. Note that the heavier Standard is a much more effective anti-rad missile than the Shrike - it doesn't stop working when the enemy turns its radars off.

you to watch the action from every conceivable angle. The Phantom (shown here) has all of the Intruder's seven different internal views (14, if you count them looking up as well) plos one extra - a second cockpit view from the bombardier's line of vision. For a cinematic approach it's more satisfying to watch the action from

A HUGE ARRAY OF VIEWPOINTS enables

the outside, where you can admire your tactical skill via fixed satellite, carrier, missile and moving track views. At any stage (including when the game is paused) you can zoom in and out, rotate or take a photograph. Alternatively, you can switch on replay mode so you can bore your friends and relatives with action replays later on.

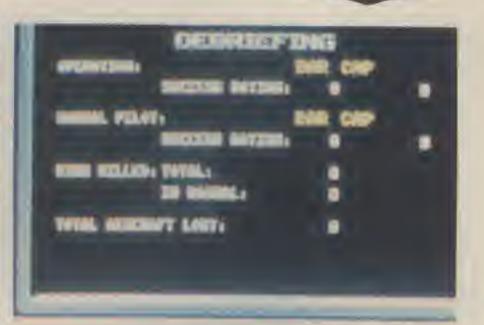

LIKE THE PHANTOM, the A-6 Intruder can be flown at practically any level of sophistication. enabling you to perform all sorts of manocuvres, including 'rollaways'. wing overs' and 'dive loops' - the exact combat conditions are specified before takeoff. Options allow you to select the level of enemy action and the rate of fuel consumption among

FLYING BY NIGHT? No problem. What makes the A-fi such a flexible bomber is DIANE, the Digital Attack Navigation Equipment. No matter how low the visibility, DIANE's search radar, tracking radar and inertial navigation system let you track both mobile and immobile targets and map the terrain abcad.

ON THE GROUND. the enemy comes in the shape of AAA (Anti-Aircraft Artillery) and SAMs (Surface-to-Air Missiles). In the air you've got to contend with MiG-17s, MiG-19s and MiG-21s all armed with cannon and heat-seeking missiles. If you're in an Intruder and the Phantoms aren't doing their job, try firing an air-to-ground missile.

THE MISSION DEBRIEFING gives a statistical review of your successes, near-misses and failures, with marks awarded for specific manoeuvres. A good manual landing on the carrier (which continues to move as you approach) scores 10 points. If your aircraft is damaged and can't hook an arrestor wire, you can call for the net - but chickening out gives you zero points.

DON'T EXPECT TO LOAD up Flight Of The Intruder to be greeted by lavish landscape graphics or astonishing sound. FOTI is a simulator's simulation definitely not for those who like their flight sims with plenty of bells and whistles attached. The main advantages of this program are technical: accuracy, flexibility and realism have all been put at a premium. The

complex mission choices, an array of sophisticated options plus the ability to perform a wealth of complex manoeuvres, guarantee long-term interest. Even if you're the kind of enthusiast who reads the technical specification for fun, the carefully-

researched flight models and the potential to create your own missions ensure plenty of gameplay. That's not to say that rookies don't get

simulator which successfully combines realism and excitement

a look-in too: the auto-intelligence means you don't have to lift a finger if you don't want to, so, if you prefer spectator bombing, simply sit back and watch the fun. FOTI is a rarity among flight sims: absolutely anyone can play it and enjoy it, no matter how basic or advanced their skill - and for a reasonable £29.99 you even get a copy of the novel thrown in!

REVIEW

Despite a slow start, Silmarils' combination of beat 'em up and puzzle solver offers superb graphics, a thumping soundtrack and more enemies than Saddam Hussein.

THERE ARE OVER 40 different types of enemy, many of which require distinct tactics or weapons to defeat. Each level has its own unique collection: you'll find plenty of lizards, flying reptiles and minidragons in the swamplands and robots galore in the factory level. Arod 7's space palace is a law unto itself anything can be found there - and it's guaranteed that vou won't like it.

It's a recipe for disaster - and that's exactly what's happened...

A nasty piece of bio-technology called Arod 7 has woken up and decided that he is going to wipe out the entire human race - and has mercilessly slaughtered billions of people in the attempt.

The few people that have managed to survive have now hit upon the ruse of creating a second generation piece of bio-technological hardware, nicknamed Metal Mutant. They reckon that if they send it to Arod 7's home planet of Kronox, it could infiltrate his defences and give him a damn good thrashing.

But what makes them so confident? This - Metal Mutant can transform at the touch of a button into any one of three different robots. How's that for versatile?

THE CYBORG IS the most versatile of all the robots. Its leaping ability helps negotiate swamplands and platform based levels, while its weaponry and gadgets can defeat a large number of opponents. These include a magnetic rope (allowing vertical travel), a powerful battle-axe, a fork-like grabber and a devastating lightning weapon.

METAL M

SHOULD YOU GET LOST in the factory level, you could find. yourself in the mines, This is no place for a saviour of the universe to get caught dangers and traps luck in every corner and you'll lose plenty of energy trying to escape. It's best to avoid it completely particularly when you run across creatures like these bin-robotic spiders.

THE DINOSAUR IS A VITAL alternative weapons system which comes into its own when combating eve-level or ground-level opponents. It has a long neck and deadly bite, a shield system, tail- and head-mounted flamethrowers, eye-lasers and the Cyberstyx-007 remote device. This last item is a small, insectoid robot faunched from the beast's back which can activate the switches other robots cannot reach.

THE TANK IS THE LEAST MOBILE of the three robots, mounted on caterpillar tracks. However, it's a quick-response weapons system, equipped with five-way overhead rapid fire, a nifty missile launcher and a head-mounted radar.

THROUGHOUT THE GAME YOU STUMBLE across an ALOG saucer, withmu which your life on Kronox would be impossible: it allows you to save your game position and statistics to date, and renews your energy supply. Only the cyborg can link up with it, by standing directly below the ship, opening his skull and interfacing with an on-board

THE CLOSER YOU GET to Arod 7, the more difficult the puzzles become. The last few screens before you encounter him take place in this mystical space complex. Metal Mutant is set a series of tests which he must solve, or die in the attempt. These include the ability to repeat music and a real stinker which pits you against an exact clone of yourself: fire at it and it fires right back. But how do you get past that door?

THE SHOW-DOWN WITH AROD 7 is the toughest test of the lot. Having honed your joystick reflexes to perfection, it's now time to put your skills to the test. Arod is a giant skull with a television screen built into his head; this screen flashes icons at you corresponding to the weapons coffected throughout the game. If you don't respond with the appropriate joystick movements, you'll survive about as long as a flatfish in a black bole.

METAL MUTANT IS INITIALLY DISAPPOINTING: all you do for the first few screens is match appropriate manoeuvres to combat situations and keep plugging away until your enemies are destroyed. If you persevere however, you begin to discover the game's appeal: horrible puzzles, 40 different types of monster to defeat and a variety of weapons and gadgets. It's really a 130-screen test of memory and

joystick dexterity - opponents come at you quickly and if you haven't selected the right droid or weapon to face them, you might as well kiss your energy goodbye. This isn't too much of a burden to begin with, since in the early stages you can destroy opponents in a variety of ways. The difficulty is cleverly graded so that by the time you face Arod you'll have the necessary reactions to knock

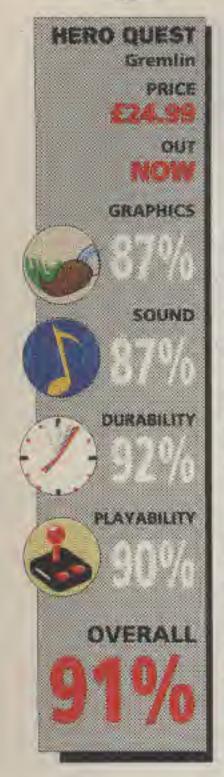

his lights out. This is just one of the game's neat touches another is a 'save game' option which doubles as a

playable combination of beat 'em up and arcade adventure

source of energy. The graphics are good throughout and include a huge number of smooth animation sequences, but it's the sound that really stands out: you won't squeeze better music onto the ST than the title tune, and the effects are spot-on. The fact that there are few of them only adds to the atmosphere and the combination of metallic clangs, voice-effects and background noises is impressively threatening to the end.

Computerised board games are nothing new, but when the conversion is of a Games Workshop best seller, things tend to get a little bit more interesting...

Hiso Gul

F ALL THE BOARD GAME PRODUCERS in the world, one is more notorious for its style, presentation and rules than any other - that company is Games Workshop.

Just to underline this point, the rule book for the table-top version of Hero Quest would make any MicroProse flight simulator manual embarrassed at its relative weediness. Nothing is left to chance, with everything covered in detail, from how to move (which is never as simple as it sounds) to what dice to roll if a Chaos Lord attacks you from behind while wearing a yellow hat...

The reason for all of
this attention to detail in
GW documentation is to
heighten its games'
accuracy, which makes it
very surprising that, until
now, none of the company's
wares have ever been converted
to computer - what better way could
there be to keep track of all the numbercrunching than by having a machine do the job?
Until recently, the main reason that none of these

conversions have appeared was Games Workshop's slightly 'underground' reputation: all of the company's games were heralded as table-top role-playing games, which limited their growth somewhat (a pity, because they've come up with some real gems).

All of that changed however, as soon as

Milton Bradley noticed a growing interest in the RPG. A partnership between the two companies emerged and the all-new Hero Quest was born: Milton Bradley produced the basic 'kiddies' version, while Games Workshop went on to make a more complex older version called, simply, Advanced Hero Quest.

Now, thanks to the simpler rules and widespread popularity of the younger version, Gremlin has seen fit to convert both the board game and its expansion kits (extra quest

scenarios - due to appear over the next few months), and is also due to begin work on the game's science fiction follow-up, Space Crusade.

AS YOU PROGRESS through the dungeon, the map (right) Is updated to show rooms, corridors, furniture and enemies. What it doesn't reveal is the location of secret doors, so all is not lost if you think that you're stuck in a dead end.

BETWEEN **ADVENTURES** comes your chance to spend your illgotten gains at the shop, where weapons and armout are always available (usually at extortionate prices). Not only does this element equip your characters for the ever more difficult trials which lay abead, but it also gives the whole thing a sense of continuity.

MOST QUESTS call for the death of a principle enemy - in this case the Witchlord. Unfortunately they usually can't be hurt unless you've picked up a magical weapon from a previous adventure.

LE MODELLING

ANDY JONES, PROJECT MANAGER AT GAMES WORKSHOP, describes his average customer as being a "15 year-old adolescent male with an interest in rock music." This might sound a little specific, but after 13 years of producing miniatures, board games and RPGs, Games Workshop is entitled to be sure about its own place in the world of games.

Fantasy miniatures have always been GW's bread and butter, in fact these days you'd be lucky to pick up one of its games without a bundle of small plastic models falling out. However, it wasn't until Dungeons & Dragons first made an appearance in 1978 that it was felt more substance was needed, so the miniatures got their own rule books and

Warhammer was born.
Since then, GW has grown and grown, producing more and more
games and expansion kits (Talisman - one of its best selling board games has five expansion sets. three of which feature new boards!)

The recent collaboration with MB opened a door to a whole new generation of gamers. Hero Quest and Space Crusade being simplified versions of other GW products. Plans are afoot for further joint company products, as well as more computerised versions - with GW hoping to take a more active role in luture 16-bit developments.

THE NUMBER OF SQUARES that you're allowed to move is determined by stopping the spinning coin at the start of your turn (top leit). Each turn adheres to one of the following sequences; move then search, search then move, move then fight or fight then move.

WHILE, FOR THE MOST PART, Hero Quest manages to faithfully recreate the fun of the table-top version (without the player having to deal with all of the 'paperwork'), in one or two areas of this conversion Gremlin has actually managed to over-simplify things. This over-simplifying is mainly apparent in the combat areas: a larger feeling of involvement

would have been generated by even the simplest of additions such as the rolling of a dice. As it stands, the fights are pretty bland and act more as a temporary obstacle than as a major part of the excitement. Another area that could be improved is the animation - it's not that there's anything monstrously wrong, it's just that there could be more of it. Instead of printing the words "Your enemy is consumed with flames" on the screen,

it would have been nice to see a large flaming ball scream from your character's fingertips towards the helpless goblin. Where Gremlin has succeeded is in taking all the

excellent conversion table-top

elements from the board game and convincingly turning them into a highly playable computer game. The control method easily lends itself to multi-player games, while still managing to stay interesting enough for a single player - a rare feat indeed. Hopefully, Hero Quest will pave the way for more Games Workshop conversions as the system Gremlin has employed could quite easily lend itself to other games of this ilk. Providing the quality stays this high (and the presentation is polished up) they should all be just as successful.

After a long absence, the 'Commando' game is back, with US Gold's conversion of Mercs (page 76) and this one from Core. But is there life in the old dog yet?

LTHOUGH WAR ZONE claims a futuristic setting (1999, to be exact) its initial jungle setting and Commando-style gameplay make it a more or less timeless shoot 'em up. And, like all games of this type, it can be played alone, but is best enjoyed when two players team up for a blast.

As the story goes, you and your partner have been detailed to lead a counter-invasion force to push back an enemy which has landed at eight strategic points in your country. However, the rest of your crew has been killed or captured, so now it's up to you.

Your prime directive is to shoot your way through eight levels of scrolling action for a date with the end-of-level guardian of each, be it a tank, helicopter, submarine or some other piece of military hardware. However, along the way it would be nice if you could free the rest of your unit - oh, and have a little fun!

THE WORD

THE IDEA OF HAVING two heavilyarmed macho men running
around causing havoc is nothing
new - but for some reason it
usually provides excellent
blasting action... War Zone is
happy to continue this tradition.
Although the graphics are
possibly a little too 'cartoony' for
the subject matter, the artist has
made good use of colour, and
that, combined with the clever

animation of the heroes' sprites gives the whole thing a nice 'clean' look. Clean is hardly a word that could be applied to the sound effects though - they're as dirty as they need to be in game with this much violence - and well varied too, to match the different weapons. And speaking of the weapons... this is where War Zone comes into its own. There are plenty of pick-ups available throughout the jungle, so there's no need to worry too much about losing one - and there's

such a variety between the different guns, cannons, flamethrowers and other 'dealers of death' that every player is bound to find a particular favourite (check out those homing missiles!). The different capabilities of, say, the laser and the grenade launcher also add to the strategic feel of the whole affair: when

disposing of some of the tougher enemies, it's often half the battle working out which weapons to attack with. Finally, the stunning smart-bomb

effect is enough to round it all off. You may think that there are enough games of this type about already (and you may even be right) - and, in truth, War Zone offers very little variation on the theme. However, if you haven't already got a game of this type, or do, but still

type, or do, but still fancy trying another, War Zone's combination of 'you watch my back and I'll watch yours' strategy and all-out action may be just the ticket.

Ubi Soft's acclaimed tennis simulator has finally made it to the ST - and guess what? It's a smash!

NYONE FOR TENNIS? Actually that should read everyone for tennis, as Pro Tennis Tour 2 is one of the few games that can actually keep up to four people entertained in front of the same computer. But while it will keep the family happy, it's something of a reviewer's nightmare - how do you go about describing this genteel summer sport? "Simple," said the editor, "just use the dictionary

"Tennis is a racquet game played on a rectangular court by two or four players. The court, divided by painted lines into sections, is bisected by a net 31/2 feet high; the object is to hit the hollow ball (of cloth-covered rubber, about 21/2 inches in diameter and 2oz in weight) over the net into the opposite court such that the opposing player is unable to return it.

definition." Okay (I suppose) here goes.

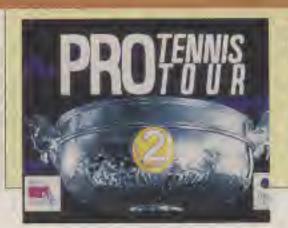

"The racquet has a metal or laminated wood frame, with gut or nylon strings forming an oval 'head,' is about 27 inches long and weighs 12oz-11b.

"Tennis originated in 15th-century France as indoor 'court' tennis and took its present form, 'lawn' tennis in 1870.

"The first Wimbledon Championship was held in 1877, while Dwight Davis donated the Davis Cup (which is competed for by all of the major tennis playing countries) in 1900. The International Lawn Tennis Federation regulates rules and play in over 80.

Well, that's cleared that up quite nicely. All that remains to be said now is that this is Blue Byte's second attempt at producing the ultimate tennis simulation so, new balls please, and... play!

THERE ARE THREE COURT SURFACES to choose from: grass, clay and asphalt. These are supposed to deliver differences in the gameplay, with grass (a fast surface) favouring a 'serve and volley' game, clay (a slow surface) slowing the ball on contact and asphalt (a quicker surface) requiring fast feet. In practice though, the only difference is the colour of the screen!

IF YOU CAN'T FIND A FRIEND and need to blow away the cobwebs before the big game, plug in the service machine and have a little solo practice. In all, there are nine different types of shot to choose from, each one definable in terms of speed and order of appearance.

SERVING IS AN ACQUIRED SKILL which may need quite a bit. of practice, but it does eventually become second nature. In 'average' mode, the idea is to hold Fire, move the cursor into your opponent's service box (tricky this, as the cursor is affected by inertia) and release the button to let fly. There - your first ace (well, maybe)! If all of this sounds a little daunting, try 'junior' mode instead - here, you only have to press Fire and the computer does the rest.

THE NUMEROUS OPTIONS ensure that you play just exactly how you want to: matches can be played as singles, doubles - and even with one player against two (or vice versa). Not only that, but there isn't even a hint of sexism here, as any combination of male and female can get involved. Every type of shot that you

could possibly think of is here: passing forehand, backhand drive, lob, topspin volley and so on - all executed via the extremely instinctive control method. Basically, the shot that you deliver depends on two things: where you hit it and how you time your stroke.

ONCE YOU'RE HAPPY WITH YOUR GAME, why not test your skills in Tournament mode? Choose your location, month and style of match, then prepare to play your heart out for a cash prize of anything up to \$2,000,000 (don't worry if you don't do that well though, as even the losers end up with something!).

ш

UBI SOFT'S FIRST STAB at creating an accurate tennis simulation was, at first sight, a near-perfect re-creation which captured just about all of the excitement, strategy and technique of the real thing... but its appeal lasted about six seconds! Why? Because it had one fatal flaw: there was an easily-found way to serve so that your opponent couldn't

possibly reach the ball to make a return, making the eventual result a matter of who made the first mistake rather than a measure of genuine skill. So do you want the good news? The problem has been solved - along with a few others that we didn't even know

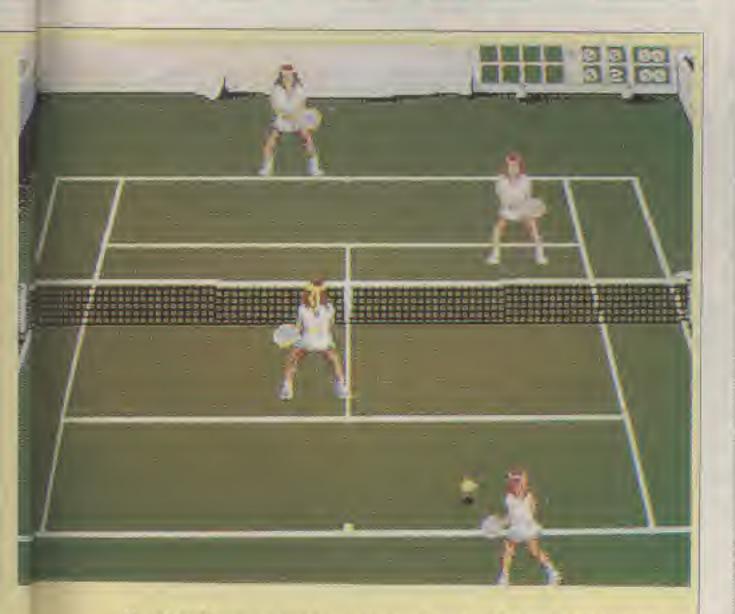

existed! Pro Tennis Tour 2 can now claim to be the tennis game and its wide range of balls and whistles should keep it this way. There's not a great deal to say about the

best tennis sim' that money can buy, and should for many sets to come

gameplay: it's a straightforward recreation of the game, with just about every shot that you can think of included - and all executed in a remarkably instinctive way. It's nice too that the superb action has been backed up by some beautifully animated graphics (just watch those ladies' skirts fly when they serve). Not only that, but the intro music is great and the sound effects are especially noteworthy - check out the sampled speech in particular for a rare treat. Tennis fans need look no further.

Jools Watsham

Up to four players can participate at any one time, providing you've got the extra joystick socket add-on. What's more, each on-screen pro can be tailored to the player's requirements by changing the attributes for forehand, backhand, volley, smash and service. In all, there's a total of 100 points to be distributed between all five - the more you give to a certain attribute, the better it works for you.

A disk is based on a circle. which is a path followed by a point which moves so as to keep a constant distance, the radius, from a fixed point, the centre. The longest distance from one side of a circle to the other, called the diameter, is thus twice the radius.

After numerous incarnations, the world's most popular sciencefiction Role-Playing Game is finally available on 16-bit. Paul Presley sees if it's been worth the wait.

Mankind, now under the rule of the Third Imperium, has realised his dream to reach into the stars - and has made contact with all manner of weird and wonderful alien life-forms for his trouble.

The most alarming of these extra-terrestrial contacts, made in 5018, was with a virtually identical race known as the Zhodani. The contact was not a pleasant one, however, and the first of four Frontier Wars soon broke out between the two races.

You'd think that after four bouts of inter-stellar genocide the two sides would have had enough, but, for reasons best known to themselves, a group of corrupt officials within the Imperium is preparing to start a fifth - and, as always, there's only one person that can stop them.

Well five people actually. Barely 10 minutes ago, your merry band of travellers was having a quiet drink when a frantic young lady pushed a holographic disk into your hands, burbled something about a traitor and was attacked by a group of thugs. You made your excuses and left... quickly. Now it seems there's a price on your head and every bounty hunter in the galaxy is on your tail.

So, to take stock of your situation: you hold the only evidence which can expose the traitors and have to deliver it to the officials on some faraway planet - all of this under the less-than-friendly scrutiny of the meanest villains in the cosmos.

It never rains but it pours...

ONCE...TWICE...THREE TIMES A GAME

THE SIMILARITIES BETWEEN CERTAIN ELEMENTS of the table-top and the computerised versions of MegaTraveller are incredible. With the possible exception of SSI's AD&D series, no other computerised RPG comes as close to being an accurate conversion. Unfortunately though, things tend to fall down in certain areas.

Recause the original IBM PC version wasn't well received by US critics, Paragon (the team responsible for the American conversion) 'recalled' the game, took on board all the negative comments and set about executing a redesign, the most noticeable result of which was the Orders command for combat.

Empire's decision to bring the product to these shores was a natural step, but it was felt that changes still had to be made to tailor the program for Britain. The keyboard controls were replaced by more accessible mouse-driven controls and the space travel was improved by simply replacing the inertia-based thrust.

Paragon is not a company that takes criticism lightly. A great deal of changes have been made to MegaTraveller 2 (due for an August release), most of which have been implemented in response to user reaction. The sequel will feature many more star systems, the ability to transfer original characters and a completely new plot. Paragon's other forthcoming release - Space 1889 will also utilise the improved MegaTraveller system, except this time it's set in the days of Victorian space travel(!).

IN A SIMILAR STYLE to Star Trek, each of your characters is assigned to different stations on board the ship, the most important of which is the computer. from which most elements are controlled. Features such as auto-targeting and tactic predictors are all available from the numerous

AS WITH ALL RPGs, character generation plays an important part in the proceedings but here there's a difference: each character chooses a career in one of five military services. At the end of this period of service, the now-trained participants are released into civilian life to start

LIFE IN THE WORLD of MegaTraveller is viewed from above, with each type of building colour-coded for easier identification. Of course, with a price on your head, local bounty hunters are always looking to make a quick Imperial Credit. Should a fight break out, the team splits up and each character is controlled individually from the control panel on the right.

IN ORDER TO REACH YOUR FINAL DESTINATION, it's necessary to obtain a Jump-2 Drive - the had news is these cost over 2,000,000 Credits apiece. The best way of earning this wad is through inter-planetary trading of the 30 available types of cargo: including everything from fertifisers to robots. The starport trading market isn't always the best place to sell your stock though...

THERE'S AT LEAST ONE ALTERNATIVE way to make money ... piracy. This has nothing to do with copying disks however - piracy involves attacking other ships and stealing their cargo. Be warned though, some ships are prepared for this eventuality and equip their cargo

ASIDE FROM TRADING, the most important factor of the game is gathering information on the traitors and their nelatious activities. Bars are always a good source of gossip, although most people will expect a little gratuity in return for their trouble.

SPACE, THE FINAL FRONTIER, To boldly go where no one has gone before, you need a ship. Movement in outer space uses strange inertia-based controls, similar in style to the classic

THE MOST ACCURATE **DESCRIPTION** befitting MegaTraveller 1 is to liken it to Elite without the graphics... but with a plot. Although it's an RPG at heart, the trading side of things will appeal to all those Cobra Mk II pilots who longed to be able to land their craft. For anyone who has played the table-top game, a lot of elements are going to appear

very familiar: the excellent charactergeneration system, the planet names and the whole 51st century environment are all there and all very well implemented. In truth, there are only two problems with the system. The first of these concerns the space travel: the Oids-style control method becomes very awkward until you get used to it (and that could take quite some time). This is especially true when the planet which you're tethered to doesn't want to let you go. The second problem is far more damaging and lies in the crux of virtually every RPG available - combat. The trouble is that

everything is run in realtime, which is all very well for an all-out action romp, but it's next to useless when you're trying to control five different

¥

A wellexecuted table-top conversion, unwieldy combat control

characters. Granted, the 'Orders' command helps out, but it's still far easier just to group your team and run from each fight. However, if you overlook those problems there is a nicely-crafted game system in there. The on-screen presentation is superb, the planets are varied enough to provide explorers with plenty to be getting on with, the trading aspect and plot devices are intelligent and the 'Stations' section on board your spacecraft is very well handled. Ultimately, the decision as to whether this is the RPG for you boils down to whether or not you want to get caught up in a great deal of combat. If not, then MegaTraveller 1 provides plenty of challenge. If so, then unfortunately you'll have to look elsewhere - MegaTraveller 2 perhaps?

REVIEW

Being a conversion of an all-action coin-op, US Gold's scrolling shooter has an obvious advantage over its rivals - but does it do justice to its arcade parent?

as you undoubtedly have, you should by now step naturally into the role of being either a hero or heroine without too much alarm. Even so, you've rarely strapped on pecs as pulsating as those on offer in this latest US Gold CapCom coin-op conversion.

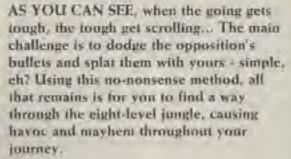

As ever, the size of the heroes' muscular bulk is inversely related to the amount of brain power needed to complete the game, so there's no need to worry about about wasting any time on background here: your macho, muscle-bound hero (whose brains don't quite match his brawn), with the help of a mate, takes on almost unfeasible levels of cannon-fodder along an eight-level route.

Okay, so some of you refuse to sign up until you know the story, so here goes... The former US president has been taken hostage by a group of foreign villains, but, for some diplomatic reason or other, the US government can't intervene directly.

This is where you come in. As head of an elite corps of mercenaries, known as the MERCS, you've been commissioned to rescue the President and halt the rebels' attempt to take control of the country of Zutula. To achieve this, your mission is to land in enemy territory, break through its tank line, neutralise the 'Scorpion' attack unit, penetrate the mountain pass, destroy the enemy's supply line and finally - 'neutralise' the enemy's HQ.

Feel better for knowing that? Good - now get out there and get blasting...

SHOULD YOU FIND YOURSELF up against a brick wall, wire fence, tree, elephant - in fact, any large obstacle - do the obvious thing... blast the hell oni of it! The usual result is a clear path for you to stroll straight through.

moret klijden vand baar parienes)

SHOULD YOU GET TIRED with walking through the jungle and wading through the water, you can always hop into a jeep (which has room for both players), a tank, or even a hovercraft! There is one small point at this stage which differs from the original: in the coin-op you have to shoot the jeep's original occupants before taking the wheel - here you simply hop in and set off.

JUST WHEN YOU THINK that you've got to the end of a level, up pops the massive end-of-level goardian. These usually come in the shape of some type of military hardware: helicopter, tank and harrier jet to name but three.

DURING YOUR hard-carned rest between stages, you're greeted by an intermission screen of a hunky guy in a posey stance. This, supposedly, is you, so maybe a little practice in front of a mirror is necessary.

TWO-PLAYER 'COMMANDO-STYLE' SHOOT 'EM UPS are always big hits in the arcades: all they have to do is offer enough opposition soldiers and hardware to attack in force and a few new weapons to wipe them out with and the coins come rolling in. Mercs is, as you'd expect, no exception - but we're not here to heap praise on the arcade game (although it is

very good indeed!), we're here to see how good the conversion is. And basically, the answer is that it's good(ish). Conversions should be judged in two ways: as re-creations of the original or as playable games in their own right (or maybe even as a mixture of both) - Mercs almost hits the mark in both cases. There's little problem looks-wise, all of the sprites and backgrounds are well executed, although the main characters move a little too jerkily for comfort. The problem's certainly not in the soundtrack either: the groovy music gets you straight into the swing of things, while the massive explosions and great cross-fire sounds all add to the excitement. The problem is that

the whole thing just doesn't capture the 'feet' or excitement of the coin-op there are too many instances where the action slows down (very

A competent enough twoblaster, but it loses a little of the 'oooomph!'

bad news nowadays) or where the nature of your opposition is too indistinct, making the proceedings more confusing than exciting. The twoplayer option does, however, pull the game up by its bootstraps. Having to choose whether or not you pick up the extra weapon or leave it for your partner adds an extra dimension (every man for himself, and all that!), while two heads are better than one in terms of getting further into the game. Ardent fans of the coin-op will have no problem getting into this one - others will probably only bother if they have a friend around.

REVIEW

Very few of the classic games of the 8-bit era have been reworked to make use of the extra eight bits. Novagen's shoot 'em up is one - but is it a worthy enough effort?

YOU'RE ALONE in a threedimensional arena - equipped only with a laser and the ability to rotate through 360" ... but we're going to have to cut the scenesetting short, because a yellow Oid has just appeared on the radar and if you don't shoot it pretty quickly then you're dead! With that small matter out of the way, a quick glance at the top panel reveals that you have nine targets to destroy, two shields left and you're still on level one (pathetic!). The vast majority of your Encounter time is spent in this arena, where you either fight and survive or flee and be crushed. Those pillars which fill the landscape deflect all laser shots (both yours and the enemy's), add a small tooch of impredictability to the proceedings.

F THERE'S ONE THING that all of the great 'cult' programmers have in common, it's that they don't release very many games. This is especially true of Paul Woakes, the man behind the classic 3D space exploration games Mercenary and Damocles (which was, after all, Mercenary II).

Before either of these though, came a more straightforward 3D shoot 'em up, Encounter, which was, to say the least, revolutionary for its day. That's not to say that it would still impress though, as its day was over seven years ago!

This isn't exactly a prolific output, but Woakes fans (let's call them 'Woaksies') should be pleased to hear that things are speeding up a little. As Novagen's Bruce Jordan informs us: "His average is improving he's up to one a year now."

The next result of this sudden burst of activity will be Mercenary III - The Return Of Damocles. This time around, the game will not only include an even more impressive 3D environment than Damocles, but also

> something which has never appeared in any of Mercenary's previous incarnations - an enemy.

KC Kim is the evil-doer in question, whose actions more or less mirror those of the player's, making Mercenary III a true one-onone battle. As long as Mr Woakes doesn't revert to his old ways, we should bring you a full review over the next couple of issues.

HILLS OF THURSDAY

OCCASIONALLY, a 'kamikaze' Oid hurtles towards you (top) - leaving you little option but to blast it to oblivion before it makes contact. Defeat all of these and a 'star gate' opens, allowing access to the next level, but only if you survive the intervening meteorite storm ... This is all a matter of ducking, diving, dodging and clever path-finding, similar in nature to the asteroid field in Atari's The Empire Strikes Back coin-op. And should you survive this perilous stretch of void, why not try turning on the spot to go back through a second time? The return trip gets faster - and consequently more dangerous - each time you attempt it, but every successful completion skips you forward another precious level.

H

ALTHOUGH IT COULD HARDLY QUALIFY as a candidate for conversion to the CDTV or some other such multimedia vehicle, Encounter is good clean 3D fun nonetheless. And while the general gameplay is going to win no prizes for its variety, the appearance of such elements as the meteorite storm and the progressive intelligence of the enemy 'Oids' is enough to keep

the player coming back - at least for a while. Despite all of its claims to be a reworking of a classic 8-bit game for the '90s and such like, this is basically a 3D shoot 'em up in the venerable Battlezone mould, which makes great use of the extra speed afforded by the newer machinery, but unfortunately very little use of the enhanced graphics capabilities. The use of a 'psychedelic' colour scheme for some of the aliens is about the only attempt made at

including a otherwise the look can best be described as functional. In fact, functional is a word that just about sums the whole thing up. It's a good blast,

graphic frill - A nippy shoot 'em up which will appeal greatly to 'Woaksies' but may lack enough variety for everyone else

but not quite the advance that it could have been - especially considering the amount of time that's elapsed since the original's release.

VILLIBARUD

PLAYABILITY

OVERALL

Any new beat 'em up needs something special to set it apart from the crowd. US Gold's latest Sega conversion is the follow-up to the infamous Shinobi, but is this enough to give it the edge?

OE MUSHASHI, MARTIAL
ARTIST, is about to take on the
fight of his life. His best chum,
Kato, has been viciously murdered
by a gang of street fighters understandably - as he
inadvertently discovered the
gang's secret plans to take over

Now, as Joe, with your trusty mutt in tow, you set out to avenge your friend, defuse a number of bombs, save the space shuttle (no, I don't where that bit fits in either!), kill all of the bad guys and get out alive. By the way, the dog's no passenger, as he's quite a dab hand (or paw) at the old martial

arts himself.
And in case you think that's all to easy, here's the killer - you've only got three minutes to complete each stage. Have fun...

THE FIRST BASIC OBSTACLE to your smooth progress is the appearance of more than too many bad guys, all armed to the teeth with a variety of weapons: knives; swords, guns. and even deadly trisbees! Despite all of this hardware though, a spot of target practice with your unlimited supply of shurikens is usually enough to clear a path...

THE ENEMIES prove a little tougher than normal, it could be time to call in man's best friend' Pulling down on the joystick and pressing Fire sends the pooch off to wrestle with the bad guy, leaving you time to pop up and finish him off with a shuriken. However, if you take too long about this, the bad guy overpowers your faithful pet and he's forced to return - a shadow of his former self (inset), leaving you temporarily without canine back-up.

THE BONUS ROUNDS provide a welcome break from the frantic platform jumping. In true Shinobi style, cascades of suicidal Ninja's willingly fling themselves from the building at an attempt to ... hurt you! Fail to kill them all and you don't get the bonus - succeed, and you're rewarded. with an extra life.

POWER UPS appear at very infrequent intervals, so grab them when you can (powered-up shurikens have a nice fiery tail to distinguish them from the standard model). A souped-up weapon is a good asset in your fight against the end-of-level guardians, as they do double the damage.

THE

IF FIRST IMPRESSIONS were anything to go by, then Shadow Dancer would score very highly indeed - especially as the large sprites are initially reminiscent of the Sega coin-op. Unfortunately first impressions don't rate very highly and the early promise soon fades a little. There are good points: the use of the dog adds a novel strategic twist to the proceedings and the background graphics are noteworthy (especially

on the later levels, with the appearance of waterfalls and suchlike), but unfortunately the sprites tend to disappear into them, thus making the action a touch confusing. Most importantly of all for a heat 'em up, the control method is very straightforward, enabling you to get straight into the action. But there's one problem that will quickly irritate almost anyone who tries their

hand... just say you're up against the last bad guy, you see the exit sign, you've slagged your guts out to get this far.

A pretty faithful coin-op conversion and a fair slice of action

you're excited, all your mates have been with you all the way - then, you get stabbed... and it's all the way back to the beginning of the level. This could be worse, as each level is split into four stages and you're only banished to the beginning of the current one, but it's annoying nonetheless, it's deep, colourful and an adequate conversion, but the fault just mentioned above may deter some.

Jools Watsham

THE LAST STAGE of each level features only one bad guy - but what a beety one! This could be a giant Ninja, or maybe a train - or even a woman in a hubble! - but whatever its form, each end-of-level gnardian has a particular weak spot (an, if you will, Achilles heel) that needs to be

continually shot at. Finding this spot is

half the battle.

IF A SITUATION SHOULD PROVE TOO TRICKY for you to handle (even with the help of your dog), then it's probably time to call up a little Ninja Magic to clear the screen. Limited to one shot per life, this magic doesn't only act as a smart bomb - it also adds a little graphic spice to the occasion by producing a different effect on each level.

Dexterity and Intelligence are required for Rainbow Arts' latest. Laurence Scotford lacks both, but is happy just juggling balls...

LOGICA **Rainbow Arts** PRICE DUT LATE JURIE **GRAPHICS** SOUND DURABILITY LAYABILITY OVERALL

ALLS! That's what Logical is all about - coloured balls to be precise, Logical is essentially a puzzle game, but it requires some manual dexterity as well, so it may not appeal to boffins who are all fingers and thumbs.

Those who it does appeal to will find no less than 99 screens of mind-boggling action to work through, each of which contains a network of channels linking a set of wheels. The coloured balls run along the channels and slot into one of the four notches on each wheel. The wheels can then be rotated in an anti-clockwise direction and the balls sent off down another channel.

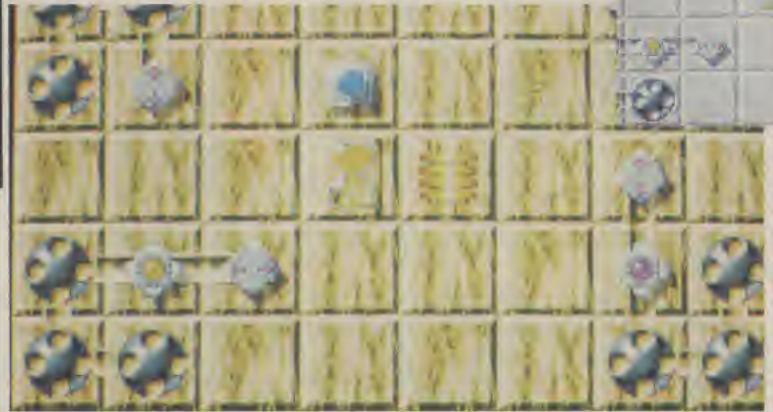

The object is to fill each wheel with four balls of the same colour, thus causing them to explode, and leaving the wheel free to be filled once more. Once each wheel has been correctly filled at least once, the level is completed. This must be achieved within a time limit indicated by an on-screen 'egg timer'. Nor can balls be left to roll back and forth at the top of

the screen for too long: a separate timer counts down for this very eventuality (indicated by the bar at the top of screen) and if it reaches zero before you have placed a ball you will lose one of your three lives.

The balls come in four colours: red, green, blue, and yellow. Up to four of them can be in motion at one time: this is usually more than enough to keep you going, but it's possible in the later screens to get balls stuck in perpetual motion between two points, thus reducing your capacity to move other balls and consequently slowing you up.

To add to the confusion, later screens contain devices such as one-way routes, single-colour routes

and teleporters, so you have to think very carefully about how to go about completing each screen.

THERE ARE THREE ALTERNATIVE SETS of grandons (which can be chapperi each time you had up) forwhen you get borred with the detault brok

COLOUR CHANGERS: Bails passing through one of these will be changed to the indicated colour. This is often useful if you require lots of that colour, but infuriating if you don't.

DIRECTION ARROWS: These act like one-way streets, only allowing balls to travel in a single direction. They also determine which way balls leave a junction.

LIGHTS: If the traffic lights appear on a level you must fill wheels in the order indicated. Fill a wheel out of turn and it will remain unexploded until those before it have been done.

COLOUR HANDICAP: These occasionally appear and show a combination of colours. A wheel must be made to explode using this combination before any other wheels will explode.

TELEPORTERS: These transport the balls to another teleporter. If there's more than one pair of teleporters on screen you will not know how they are linked until you try them.

THE CHANNELS are the routes which the balls take between the wheels. the next ball will be THE BALL DISPLAY shows how many balls are currently in motion -

THE COLOUR FORECAST only appears on some screens, and helps your planning by showing what colour THE BAR GRAPH at the top of the screen shows how much time remains before the current ball must be placed in a wheel.

up to a maximum of tour. Controlled by the mouse, THE CURSOR is used to select individual

wheels and balls.

RALLS remain in the wheels until they are clicked with the left mouse button. This causes them to travel down the channel until they reach another wheel.

> COMPLETE ALL. 99 LEVELS and you're rewarded with a password which allows you to access the level editor. This is a simple to use utility which gives you the opportunity to design and test

LIKE MOST OTHER GAMES of this nature, Logical doesn't really hold any great surprises in the looks and sound stakes. The graphics are merely functional (although quite smart), but the inclusion of three alternative sets is a thoughtful touch. The sound is restricted to a background ditty (which quickly becomes monotonous, but can at least be switched off), and

some suitably metallic sounding effects. Logical is easy to play - you hardly need the instructions - and since everything is controlled with the

mouse, it doesn't take hours to get to grips with. Masters of the puzzle genre may find it a little too easy though - on my first play I managed to reach level 23 before losing

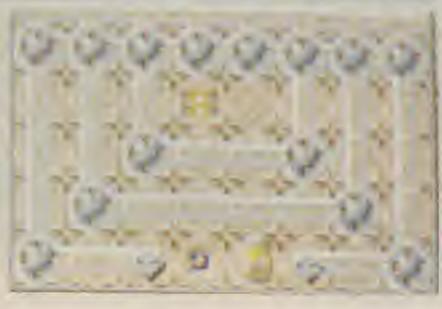

action-puzzie combination power

a life. Even so, at that stage the complexity of the puzzles was beginning to look promising, so undoubtedly the last few levels will require more than a few attempts from the average player.

Incentive has long-since proved that it could produce a games creator that had the power to produce games of commercial quality, while still remaining comparatively simple to understand and use: that product was, of course, the superlative Graphic Adventure Creator. Now the Berkshire-based developer has done it again, only this time it is its Freescape system that is being made available to the public.

The good news is that 3D Construction Kit, in competent hands, could feasibly produce games of the quality of Castle Master. The other good news is, as long as you can understand a simple BASIC program and have some artistic and creative flair you could get a whole lot more out of it.

If you've ever used a 3D object generator, then you'll know how time-consuming and laborious the job of creating even the simplest shapes can be. In contrast, creating shapes with 3D Construction Kit is a doddle.

In addition to simple lines, there are two basic 3D shapes - cubes and pyramids - and five 2D shapes to be manipulated. This isn't as limited as it sounds though: using these basic elements, a variety of complex objects can be constructed, as the kit allows each shape to be stretched, shrunk or turned to a severe degree.

For ease of handling, several individual shapes can be defined as a group, and then manipulated either individually or together.

Objects can be coloured from a range of 16 user-defined colours, but the kit uses a method of 'dithering' which expands this to a total of 256 shades. To add to the flexibility, each area that you define has its own palette, so the user isn't confined to using the same 16 colours for the whole game.

Objects can also be defined as sensors (which will detect the presence of the player - and even fire at him if you wish), made visible or invisible, destroyed or made movable.

Once the game environment has been created, it's manipulated via a simple language - Freescape Control Language (FCL) which is constructed as a set of conditions which can apply to areas, to objects or even globally. There are 52 commands to get to grips with, but the principle behind their use is fairly simple and a little experimentation should be enough to gain ample proficiency to begin constructing a game.

The commands are also used by the Animation Object Controller (AOC). Whenever an object is required to move, an AOC is allocated to it containing a few lines of code that describe the Turn to page 94 animation. The AOC can then be

GREAT, we've entered an underground corridor, but it looks a bit gloomy. Let's try the light switch... that's better. This simple, but effective trick is achieved by creating two versions of the corridor, each of them with a different colour palette. When the player activates the light switch the program records his position and then places him in exactly the same place in the alternative corridor. Clever huh?

FINALLY, we emerge back in the inner area and there's another building to explore, which may lead onto even stranger environments. The only limit is your imagination.

switched on and off by some controlling code applied to an object or area. Once again, the use of animation is a skill that is quickly gained with a little brave experimentation.

There are 256 variables, the first 30 of which are reserved for use by the system. These can be used to keep track of the status of your player or various events throughout the game.

The area surrounding the main view and containing the player control icons must be created using another art package such as DPaint

III, although there are two examples included. Once the control panel has been created, the mouse is used to define the areas in which the user should click for various controls to function and the size and position of the 3D view. Finally the instruments can be defined. These are energy bars, score windows, message windows and so on.

FCL has two different sound commands. These are used to play any of 32 sampled sounds, seven of which have already been defined. These are commonly used effects such as a laser sound, a bump and an explosion. Once again, a separate sound sampling package is required to create your own sound effects.

Testing the completed game is simple because you can skip back and forth between the editor and the game at will. This makes designing a game a very immediate process because you can try ideas out the instant that you put the code in. There's also a handy RESET command to revert everything to its initial condition.

TO BEGIN WITH, you only have one object, and that's a huge cuboid that represents the ground. You can either use that as a basis for the rest of your construction, or delete it and start again from scratch.

THERE'S A SUBSTANTIAL GAME INCLUDED with the kit that shows some of the powerful things that can be achieved. As well as being a fun estra, this is also a useful learning aid. By loading the game into the editor it is a simple matter to see how Incentive has constructed certain objects and how its game designers have used FCL and AOCs to achieve particular effects.

THIS
HELICOPTER
IS A GOOD
EXAMPLE of
the sort of
complex
objects that can

be created with 3D Construction Kit. It's well worth studying, because it shows how to use the basic shapes economically to create more detailed objects.

THE WORD

3D CONSTRUCTION KIT IS ONE OF THE BEST 16-BIT UTILITIES to appear - ever! Whether you're just interested in using it as a 3D art package or whether you want to create games to rival Incentive's own, you'll find it to be an ideal tool, with the combination of dropdown menus and short-cut icons taking the drudgery out of object creation. The documentation is quite concise - especially in its description of FCL - so you might have to

experiment quite a bit before you fully understand how things work, but there are some good examples of its use in the sample game which should help. The package also includes an instructional video, but unfortunately the first few minutes of this are wasted with generalised promotional blurb (what's the point of trying to sell the game to you? - you've already bought it or you wouldn't be watching the video!). Once the video does get around to the instructional element it's good, but it only goes as far as explaining simple object creation. Users who register

their purchase also get product support via the user's club. Freescape games were never the fastest things in the world - so don't expect miracles here. The final frame rate is largely down to the user though:

A powerful, but accessible tool that really can be used to create 3D games of commercial quality

if you create a huge area with hundreds of large multi-faceted objects and about 50 general conditions then you've only yourself to blame if you've got time to make a cuppa between each frame. With a bit of care though, you'll find you can fit quite a lot into each area without drastically affecting the running speed. All in all, 3D Construction Kit can't be too highly recommended. Even if you have no plans to become the next Bullfrog, you'll still have weeks of fun just playing around

EDEMOS DOMAIN

IN A SLIGHT **DEVIATION** from the norm this month, The One is proud to present a PD/Shareware Games extravaganza. If you thought that budget games were the lowest form of entertainment going, think again. Although Shareware can produce some real turkeys, it's not all bad - and, just occasionally, it turns up a real gem that can put full-price software companies to shame. This month we take a look at some of the best from the latter category.

G-ORB

THIS IS MORE OF A DEMO of things to come than a full game, but it's still worth a look - if what follows keeps to the same lines, it's going to be great. In this game, you manipulate a small sphere-like vehicle around a series of chambers. A number of switches lie about - the idea is to use them to open passages leading further into the chambers. Control is similar to Oids, with a thrust device needed to steer your way around. Fuel is an important feature and makes up the crux of the puzzle solving - it can be found in various locations. around the screen and is usually just enough to get you from one piece to the next. G-Orb is a nicely-crafted game, and the demo provides a sufficient short-term challenge. The full game will have over 80 screens to keep you going and will be available from most good Budgie stockists. Look out for it very soon.

PICK OF THE MONTH TRAIN SET

HANDS UP ALL OF YOU who have ever wanted a train set. Not one of those little ones that goes around in circles, but a really massive one that will get featured on Blue Peter and the like, with mountains and tunnels and stations packed with people. Goodmans International's Train Set doesn't quite offer you that, but what you do get is an excellent puzzle game in the Pipemania mould. Instead of piecing bits of pipe together, you guide four trains along various tracks, changing the junctions, controlling the speed and stopping at the correct stations along the way. Okay, so they don't look much like trains, the stations are represented by dots and the tracks are solid grey lines, but the essence of a large railway is there for all to see - and once the game starts it really is difficult to stop playing. Just grab your engineer's hat, jump on the footplate and start making those chuff-chuff sounds - you'd be a fool to miss it.

TALKER

is well worth a few minutes at

least.

NOT STRICTLY SPEAKING a game, but plenty of fun nonetheless. Talker is what you'd call a pleasing timewaster. Simply load up the disk, type something on the keyboard and Talker will make your Atari say it. Yup, a speech generator. It's not sophisticated enough to have different voices - everything comes out in that grating, monotone computer voice but it does handle most words well. You don't have to type in the sounds of the word, the HOW AND YOU program translates it into phonetic English for you. Talker

FOOTBALL

WHICH WORLD CUP made a dog named Pickles famous? Which team's players were promised a house if they won the 1938 World Cup? Which famous player was sent off for swearing at a referee? If you know the answers to these questions, chances are you'll do quite well at Football Genius from Floppyshop. In each match, progress up the field is dependent on answering questions correctly. You can play both one-off friendlies and FA Cup tournaments, using any teams from the English League. The only real flaw in the program is that the questions tend to come around too often, although having a five-second time limit still requires some fast thinking. Although this game is a bit tedious for single players, it's great fun to play with a crowd of football experts'.

FOOTBALL MISSILE ALERT

WHO REMEMBERS MISSILE COMMAND? Well it's back, new and improved for the '90s. There are several versions of this arcade trackball classic, but Missile Alert is by far the best. For those of you too young to remember, Missile Command put you in charge of protecting a city from incoming missiles. You'd do this by positioning a cursor under a missile and firing a retaliatory strike. The main difference is that now you don't just have missiles to fire you also control a tank that can spit what look like fireballs into the sky. These keep going until they reach the top of the screen, so multiple hits are possible. It's fast, furious, fun and highly addictive. Immerse yourself in a real classic as soon as possible.

DEATH OF A PRESIDENT

AN ADVENTURE GAME with a real difference, this one has no solid ending... but then again, it couldn't! Death Of A President is based on a controversial investigation into the assassination of John F Kennedy. Although it's a three-disk affair, only one of them has the actual adventure on it. Disk One is a pictorial database of the event, containing digitised pictures of people, places and documents surrounding the assassination, along with factual information and speculation. A bit like watching a television documentary. Disk Two contains a selection of sampled sound effects, speeches and interviews from people connected with the investigation, while Disk Three is the actual adventure. This involves examining the scene of the crime, asking lots of questions and trying to come to a satisfactory conclusion. It's a unique idea and very absorbing, recommended if you fancy trying something different.

Win a Ronda Cubl

This must be the most advanced aff-road bike there is! It's automatic, so it's easy to ride, and its lightweight design and luturistic styling make it stand out from the crowd! The Cub would cost you £1500 to buy, but we're giving one away!

BLOOD MONEY

Sizzlers £9.99

SYGNOSIS' BEST GAMES have usually been those developed by Scottish team DMA Design - and this two-fisted shoot 'em up (first reviewed in issue 9) is no exception.

The action unfolds across four landscapes, each of which scrolls inexorably forward as you and your partner burn holes into the oncoming hordes. The more you kill, the more

the cash piles up - the dough you earn is then used to purchase extra weaponry and also to allow access to later levels.

Blood Money isn't the fastest horizontally scrolling shoot 'em up ever to hit the wonderful world of budget software, but it's certainly one of the most challenging and technically accomplished.

If you frequently find shoot 'em ups too easy, or if you have another gamer handy to help you out, then this is well worth checking out.

क्षेत्रकेक

THE PRICE!

NON HIN

Mirror Image £9.99

HIS IS A SERIOUSLY WELCOME RE-RELEASE for what's generally agreed to be the best vertically scrolling shoot 'em up ever written (first reviewed in *The One*, way back in Issue 11).

If imitation is the sincerest form of flattery, then Xenon II is one of the most flattered games going, as the many innovative features that the Bitmap Brothers worked into it have been ripped off by most other development teams.

The basic action involves flying through a very restricted chasm, taking out anything that moves... and even a few things that don't. What really sets it apart though are the inventive power-ups which are bought at the shop which appear twice during each level. One really clever idea is that you can sell old power-ups to provide funds to buy new (and better) ones. Naturally there are some very nasty end-of-level guardians to be done away with too.

The whole thing is nicely topped off with three-layer parallax scrolling and the Bomb The Bass MegaBlast soundtrack. If you haven't got Xenon II in your collection, now is the perfect time to put that situation right.

क्षेत्रके के के

HARD DRIVIN'

Respray £7.99

conversion of Atari's classic stunt driving coin-op. A realistic simulator (first reviewed in issue 15), Hard Drivin' puts you behind the wheel of a sports Ferrari which can be put through its paces along either of two tracks; speed or stunt.

The speed track is a flat course, where car control is all important in order to

maintain a high speed. The stunt track offers three major obstacles - the bridge-jump, the loop-the-loop, and the bank -

each of which require precise control.

In this conversion, the juddering cabinet is not really missed that much, while the sensible control system almost manages to make the joystick a reasonable replacement for the wheel.

SRIGHT

MIAMI CHASE

Code Masters £7.99

MAGINE CHASE HQ crossed with Super-Sprint and you'll be half way to visualising Miami Chase. You play Lou Ferrari, an undercover agent of the Drug Enforcement Agency who's been detailed to clear the streets of drug dealers. This is achieved by careering dangerously around the city streets in (what else?) a Ferrari, taking pot shots at the offender's cars which you've tracked down by checking a radar cityscape.

While you're trying to bump off villains you have to take care not to damage civilian cars or brush with the local police. Once you've taken out all the gang members it's time to track down the big boss.

The action is made more interesting by collecting power-ups which produce extra weaponry (including mines), and a garage in which you can buy yourself more add-ons to give your car better handling.

Miami Chase is superbly presented and initially fun to

play, but the action soon becomes a little repetitive. Even so, this is as good as many full-price releases, and definitely worth a look if you like driving combat games.

222

LICENCE TO KILL

Respray £7.99

FTER THE POOR EFFORTS that went under the names of Live And Let Die, A View To A Kill and The Living Daylights, Domark's fourth attempt to transfer the Best Secret Agent Ever to the computer screen resulted in probably the best Bond game ever. Not only did it successfully capture the spirit of the film. it was also an enjoyable game to boot.

The first level sees Bond travelling by helicopter. trying to reach Sanchez (our bad guy) and stop his heroin-dealing ways. The second has Bond shooting it. out with Sanchez's personal army, the third stage takes place back in the helicopter (only this time Bond's dangfling below it) trying to ground Sanchez's

plane, while the fourth sees him water-bound, desperately trying to reach the villainous Sanchez's plane before it reaches Cuba. Okay, so that takes care of the film's introsequence.

The fifth and final level recreates the film's climax. where Bond finds himself

driving the truck full of heroin. And although you don't get to drive on two wheels like Timothy Dalton does in the film, you still have to deal with a Stinger missile-armed Sanchez.

So what exactly happens between level four and five? Presumably it wasn't interesting enough to make into a game. I don't know myself, you could have had a shoot out in the fish factory or a punch-up in the bar rent the film and see what you think. Still what is there is great entertainment and well worth the new asking price.

CJ'S ELEPHANT ANTICS

Code Masters £6.99

J (CODE MASTER'S JUMBO?) is a cute elephant who has escaped from the zoo and is trying to get back home to his family in Africa - an adventure

which takes him through several countries in a colourful platform romp.

Of course, the route is blocked by a variety of nasties ranging from frogs to penguins. Collision with any of

energy, so it's fortunate that CJ can fire peanuts from his trunk. Enemies in hard-toreach places can be put out of business with a well-placed bomb. Once

destroyed, enemies leave either another bomb or a fruit bonus.

Unlike traditional platform heroes, Cl doesn't worry about falling long distances - he has a handy brolly that

these drains CJ of his opens up to break his fall. Learning how to manoeuvre while falling is an essential skill though, because there are plenty of spikes about to spear the bottoms of unwary jumbos. If CJ makes it to the end of a level there's always something large and nasty in wait for him...

> CJ's Elephant Antics is good fun and offers a reasonable challenge for the price. Although the quality of the graphics is, at best, fair - and never particularly consistent.

INDY HEAT

Leyland Corp

IT WAS ONCE SAID THAT, "To a man of the world, the Universe is a suburb." Does it not follow then, surely, that the Milky Way is a ring road, Jupiter is an out of town Tescos, the Moon is a sub post-office, Milton Keynes is an out-of-order portaloo and an amusement arcade is Mercury Communications Cardphone?

The answer is simple - you try paying to play vids with a Mercury Card and you'll find out that, indeed, the Universe is much, much more like a Casualty

Ward. Such penetrating insight! What devastating analysis! But still not as much fun as playing Leyland's new vid to hit the streets, Danny Sullivan's Indy Heat.

You'll remember that Leyland's last successful game was another racing game, endorsed by an All-American guy, Ivan 'Ironman'

Stewart's Super Off-Road Racer, which had you playing a version of Super Sprint on a bumpy indoor track. Virgin thought it good enough to produce a home

version - and very creditable and playable that was too.

Since then, Leyland has tried out a version of *Othello* on an unsuspecting world which reportedly, "did well on campus sites," which suggests it got a good kicking elsewhere.

So now the company is going back to basics - and with Indy Heat it's produced

another game in the Super Sprint mould - but it has to be said, it's very polished, playable and altogether something of a wheeze to play.

Endorsed by another Famous Driver (famous across the good, that is)

Endorsed by another Famous Driver (famous across the pond, that is) - Indy Heat is based on, I think, Formula 2000 racing - which is very fast and is raced over long distances, so that the events become a cross between Formula One and endurance.

You play the game, either alone or with up to two other friends, using the simple controls of steering wheel, accelerator pedal (which becomes a brake when you take your foot off the gas) and turbo button that gives you a bit of extra wellie on demand. Whatever, there are always five cars in the race - and beware, the drone cars show no mercy!

The season is raced over 15 different tracks, all very prettily constructed in a kind of 'top-down', yet semi-isometric perspective. The result looks good - far better than Atari's sad effort with it's own Super Sprint variant, Badlands.

Obviously, the idea is to finish the appropriate number of laps before anyone else - but this is made harder by the obligatory 'pit stops' that become necessary during the race itself. A little

man walks out from the pit lane holding a placard, which means either you're running out of fuel or that your vehicle has been badly damaged.

Now comes the clever bit...

Drive carefully and you might only need the one stop in a race, saving you valuable time while your automatic mechanics scurry around your car like manic ants and fix you up. Drive like a maniac and you'll probably need two stops - but on the other hand, you'll be going faster... and maybe you can risk going the last lap or two ignoring the advice to pull in! Or maybe you'll break down in a steaming heap!

To add to that, in between races you can reequip and upgrade the motor using the prize money that you've won during the race - or if you're rich, you can even buy extra prize money by inserting additional coins!

Six components that can be upgraded are:
Turbos (to give you extra boosts), Brakes (so
you can slow down faster), Tyres (better grip),
Crew (to make your pit stops faster), MPG (so
you get better fuel mileage) and Engine (so you
can go faster). It's this level of dynamic strategy
within and between the races that makes this
my game of the month.

BATTLESPHERE

W Industries

YOU'VE PROBABLY SEEN VIRTUAL REALITY on the telly by now, now's your chance to experience it for yourself - in the flesh!

W Industries got a lot of coverage with a big splash launch of the world's first Virtual Reality coin-op last month - now the sit-in unit is beginning to filter through to the major arcades, with some expected to hit Funland at London's Trocadero pretty soon.

The first two games are top notch efforts: VTOL, a flight combat game (complete with low-level bombing of an enemy HQ) and a more challenging quest for the average space cadet, Battlesphere, where you have to zap the baddies and take out an enemy Battleship into the bargain.

Playing a game without a screen in full stereo vision - where you are surrounded by the game itself and blasted with quad CD music plus realistic sound effects - is something of a blast. Reports from sites where units have been installed (South Coast World at Bognor was the first) are of long, long queues to play. Get out there and grab a piece of the action for yourself - if you can!

STRIKE FORCE

Midway

WILLIAMS PRODUCED THE BEST ARCADE GAME in the history of the world in the early 'Bos, with Defender. The Williams folks actually produced a whole hunch of classics, such as Robotron - which was very successfully updated to great acclaim, becoming Smash TV in the 'yos.

So why not produce an updated Defender? You might as well say why not produce an updated Mona Lisa? Midway's tried - and it looks like painting-by-numbers.

If you ever loved the original, don't forture yourself by playing this. If you never did, ironically, there's still enough left to make it worth a few top's if you can work on the new, wildly complex, scenario.

TIME

Sega

OKAY - SO YOU'VE DONE VIRTUAL REALITY. How about Holography? Holography? Yup, three dimensional images. Not flat. Moving real people, too. Not drawn or made up of polygons. Real tiny moving 3D people! Neat or what! This is not science fiction folks, this is exactly what Sega has managed to do with Time Traveller.

Using, I believe, variable focal length mirror technology (yoinks!), Time Traveller allows the player to move the central

character, a cowboy, to

react to events around him although it can hardly be described as full interactivity.

The result is rather like playing a true 3D version of *Dragon's Lair*, where by manipulating the joystick you set off stored sequences of movements - even so, the results look like they could be sturning.

I've only seen videos of the unit to date, but it looks like another development that, like VR, will make the arcades worth more than the occasional visit, once again. Nice one Sega.

MM... IT SEEMS THAT LAST MONTH'S NEW-LOOK, easy-to-use Tips section wasn't quite as easy-to-use as I first thought. I'm not sure where you got the idea that the Contacts section was an all-purpose home for every last hints and tips query you have, but anyhow - here's the way it is

The address to send everything to is: The One For ST Games, EMAP Images,

Priory Court, 30-32 Farringdon Lane, London EC1R 3AU.

However, depending on your particular need, your envelope should be marked as follows:

For any Cheats (such as 'Press the Space Bar while standing on your head and drinking a glass of water for infinite lives') head your envelope: CHEATS (you see, this is simple really!).

For any Questions (or answers to them) head your envelope: HELPING HANDS. I will do my best to print a response, but if it's beyond even me then I

will ask your fellow readers to lend a hand.

For Contacts head your envelope: CONTACTS (it's getting even easier!). I can't guarantee that your name will be printed, but if you would like me to consider you for the following month please say so clearly on your letter. Incorrectly headed envelopes will simply be discarded, so pay attention. Honestly, it's like talking to myself sometimes...

TOTAL RECALL

When the title screen appears (that's the one with Arnie's face on it), type LISTEN TO THE WHALES. This gives you infinite energy on the platform levels. For the driving sections, pause the game and type JIMMY HENDRIX (OK, so his name's Jimi, but that's what you type).

FROM NICK SMITH, LONDON

Dear Brian, 1. How do you acquire the flames on Targhan to destroy the evil one?

2. Has anyone any idea where the mother alien can be located in any of the levels in Infestation? I've had this game for three months now and I get the feeling that she can't be found on any level. I suspect she's not in any room, so she's either on the ceiling or outside on the moon's surface. Maybe she's not in it at all. Can you help?

Martin Lond, Skipton, N. Yorks

 Typical. The first letter out of the sack and it gets us all stumped. It's time to turn things over to the readers. Can you help out? You know the address.

Dear Brian, I am stuck on a particular section in Venice in Indiana Jones And The Last Crusade (The Graphic Adventure). I can get into the catacombs, but I cannot think of any way to open the grating. Gareth Ashley, Bardsey,

Leeds

 The catacombs are a lot larger than you think. If I'm correct, you haven't found the entrance to the second level yet. First you need to get the bottle of wine from the table in the restaurant. Next, take it to the cavern filled with water and fill the bottle. Use the bottle on the torch on the wall and then pull it. You should find yourself on level two. The rest, you'll have to work out for yourself.

Dear Brian, I have played and enjoyed Rick Dangerous very often, but I am stumped in one room in the second stage (Egypt) I've enclosed a map. G. White, Mereworth,

Kent

Dyfed

• The trick is all in the timing. The best way of dodging the spears is to time your jumps so that the sounds are in synchronisation with the sounds of the spear firing, then duck when you reach the second platform.

Dear Brian,
I know the cheat for
Shadow Of The Beast but I
can't kill the three-headed
dragon. I can get a gun,
but I can't get back to the
dragon afterwards.
Tom Morgan, Tenby,

Depends on which dragon you mean. If it is the red one then go to the right after getting the gun, then shoot him. If it's the grey one, then just go straight up.

TELEPHONE TIPS

Over the past few months The One's offices have become completely swamped with telephone calls most of which are tips-related. Unfortunately, it's now getting to the point where we're spending more time answering calls than we are writing the magazine! So we're going to have to put a stop to this. If you do have a valid reason to get in touch, please try to make your call between 4.30pm and 5.30pm on Friday afternoons, when either myself or someone else in the office should be free, If it's tips information you want, you've got a better chance of receiving a reply if your query is written.

CONTACTS

Let's make one thing clear. Whatever impressions you may have been given about this column, it's got absolutely nothing to do with any deviant practices other than the playing of computer games (especially not those involving rubber and kitchen implements). If you're stuck in a game then there may be somebody listed below who can help you out - if you're stuck in anything else you've only yourself to blame!

POWERMON

This month's Player's Guide takes a look at one of the finest strategy games to come along since Populous. Take it away Matt Sullivan...

THE BEGINNING

seriously, 'begin' and watch the other armies on the map. It is often advantageous to try and establish an alliance with the stronger side (which you could break at a later time). Watch which villages are attacked first and which paths the armies walk, then you can decide how best to start. A good start is vital.

When you begin you will have less food and men than any other army on the map - you should attack the nearest small village and recruit all the men to hunt for food.

FOOD

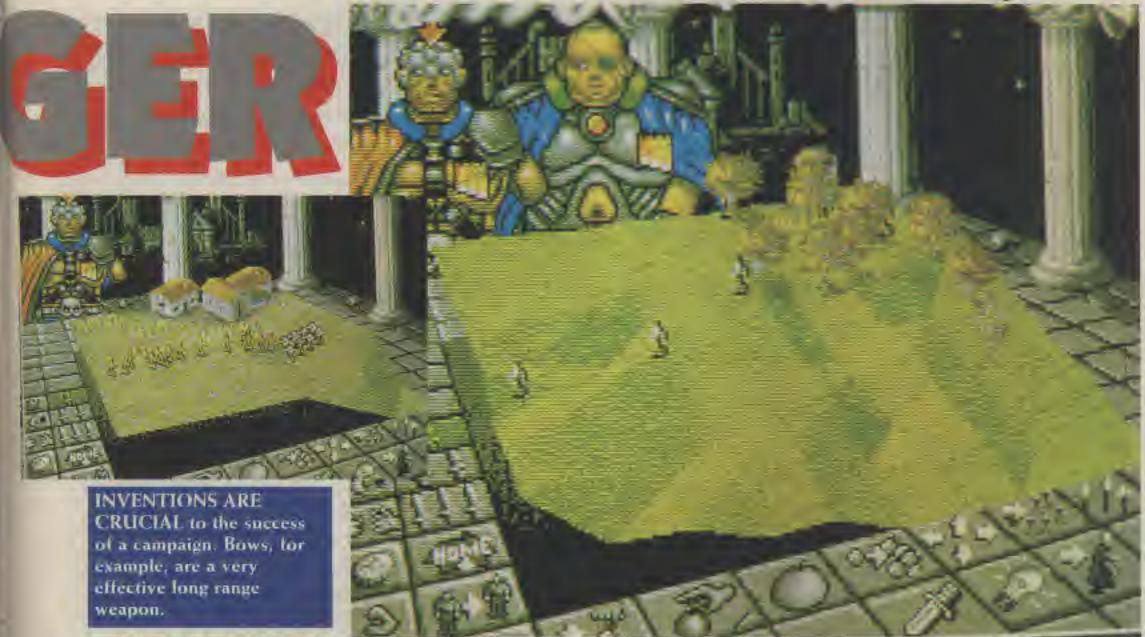

When you start the game you always begin with a small amount of food. Killing sheep is the easiest method of gaining more food. Farming takes too long and is not a practical use of manpower. It is better to recruit the soldiers and attack other villages that have spent time farming. Use the

question mark icon to check how much food a village contains.

Computer controlled captains always carry large amounts of food. If you see a captain roaming around the map without an army then attack as the food he was carrying will be dropped in the form of a

sack of grain. These sacks can often be found after battles and the computer never collects them

Never trade for food unless you are really desperate and then make sure you only trade pots or you will make the job of attacking the computer's armies much harder.

FIGHTING

THE MOST IMPORTANT FACTOR to consider in a fight is the safety of your own captain. If a fight is going badly, try to run away! This is always possible if your captain is not involved in the fighting and works in your favour, as once the other army's captain is dead then the soldiers will try and run away.

Weapons are also important to a fight - a soldier with a sword can kill up to three unarmed men. Bows are useful if you have larger numbers of men and high aggression because they can wipe out huge numbers of soldiers before they reach your army. A useful tactic is to attack an army when you are some distance away from them. Then, after your men have fired a volley of arrows, turn and run as this will often weaken a larger army quite substantially.

To walk past an army without attacking it (or vice versa), put your aggression factor down to one. Try to walk around the outside of the main body of the enemy and keep using the movement icon so that your army will not turn and fight. The computer army will turn too late, once you have walked past it.

After certain fights you may capture captains. They are often best used to spy on the largest army on the map so you can see where its forces are deployed. Be sure to

remove your captain from the army he is spying on before you attack.

Another use for captains is to give them a small amount of soldiers and send them around the back of an army. If you then attack with the main force, the computer army's captain will be left undefended at the rear.

Don't build boats if you can help it, build weapons and either wait for a computer army which has boats to attack you or attack them. Either way, you can then collect the boats that are left behind. Collect all the weapons that are left after a battle.

If you are fighting a village, use aggression level one so that you leave some men there. If you are attacking a larger town or city and you begin to lose, switch to aggression level two. If you are fighting an army that is not in a village then use aggression level three: there is no need to leave them alive, especially if they are just going to go around attacking other villages.

If a village you control just makes pots, recruit all the soldiers you can from it and move on to another village that provides something more useful.

To get the maximum use from inventing, recruit all the soldiers in a village and then invent so that instead of two teams inventing different things in one village, you just have one larger effort.

Also, attack trees to prevent an enemy village from building a lot of weapons. When the enemy builders spread out to find trees, it is then easier to pick them off one by one.

The best way to win fights is to get a catapult or a cannon. While inventing, set your aggression level at three until you create one.

Cannons and catapults can destroy up to 10 to 15 men with one shot, but can also destroy houses and workshops (along with their food and inventions). If a computer army gains a catapult, take extreme care!

Make sure that you save the game before you go into a large battle, then if you don't win it doesn't matter. Also, save after you win a battle so that you don't have to risk re-losing it at a later date. It is also advisable to rest your army before engaging in a major battle, as this can often greatly affect the outcome.

If the game ends up with one huge computer army running around the map while you try to avoid being hacked to pieces, carry on avoiding the army by running to the opposite end of the map and start inventing catapults. The large army will walk down towards you so, before they arrive, run to the other end and invent there. Repeat this until you have a catapult, then attack the army from a distance (as described above), run away and carry on until the army is a more manageable size.

CASTLE

Although 3D software technology has only recently become fashionable, Incentive has been there right from the start. This month sees the launch of its very own Freescape-based construction kit (see review), so what better excuse could we find for the programming team to take us on a trip through one of its classics?

BUSTIN' FOR BEGINNERS

THE EVIL MAGISTER has incarcerated your twin brother/sister in a room somewhere within Castle Eternity - and you're there to play the part of Heroic Rescuer. The only way you can rescue him/her is by defeating Magister and all his ghostly chums.

Unfortunately, you only have a limited amount of strength, which is sapped every time you a) fall heavily or b) encounter a spirit. It's vital to keep your strength up - by eating food, drinking potions or simply visiting the hospital, gym or barracks.

AS SOON AS YOU'VE STARTED THE GAME, look straight down (SHIFT-L), then press the right (action) button a number of times (between 12 and 25 should do the trick) until you hear a noise; then look straight forward. You'll see four coloured squares on the ground ahead. Throw rocks at them for a choice of infinite revitalisation, all 10 keys, rock travel or the end-game sequence.
